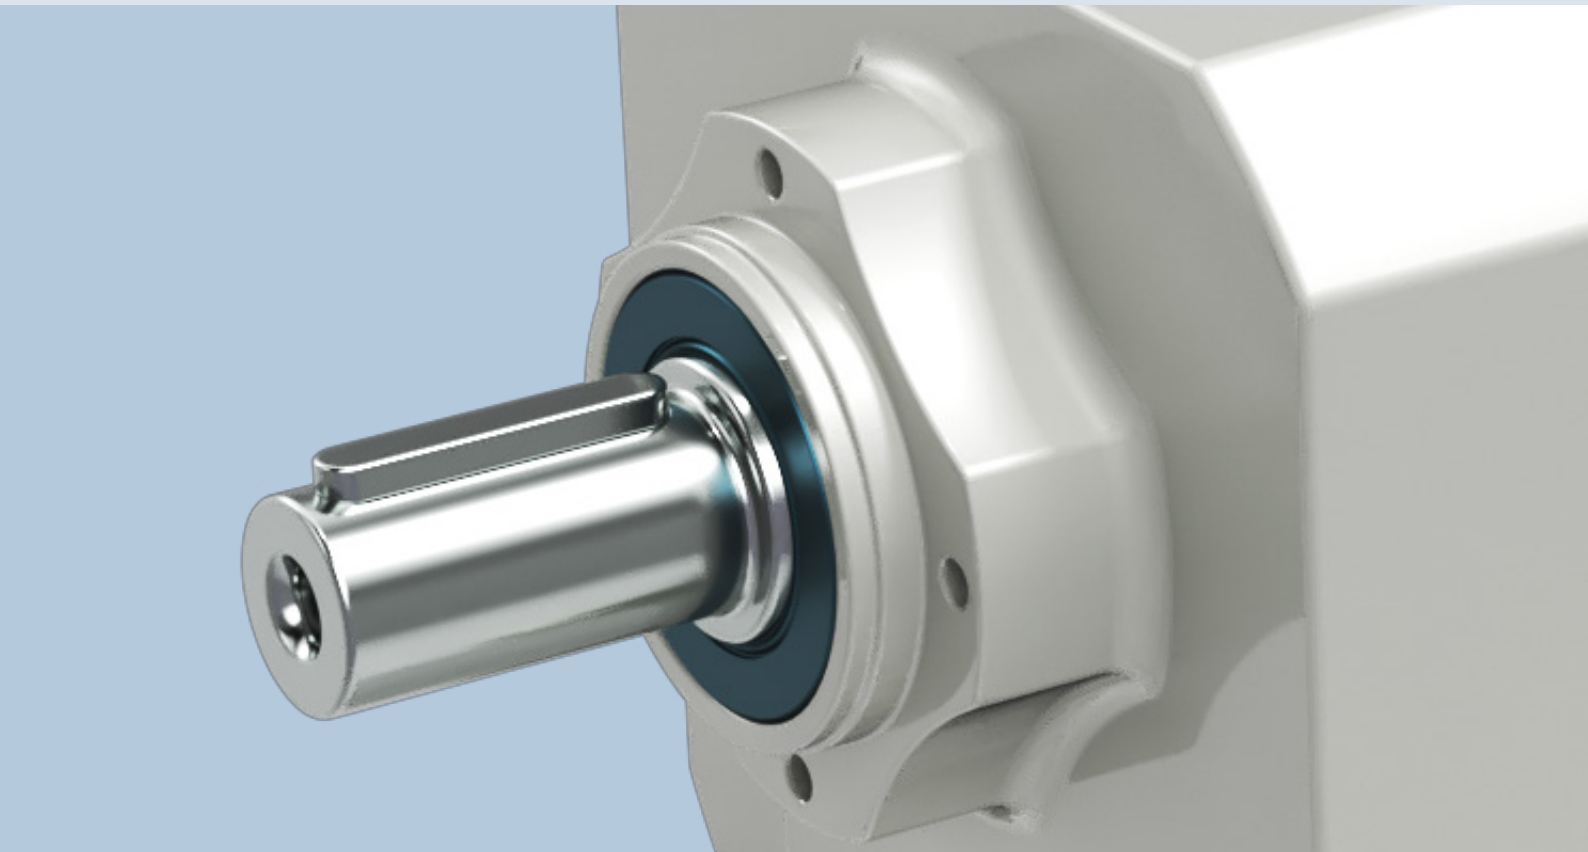
INDEX

CONFIGURATION GUIDELINES



ENVIRONMENTAL CONDITIONS

Ambient temperature

The ambient temperature influences the gear unit and motor performance.
Please take into account the following guidelines for a correct product configuration:

- **Oil Seals:** please refer to the oil seal options in the catalogue section relating to gear unit options and select the correct alternative according to product operating conditions.
- **Lubricant:** if the operating temperature is outside the indicated range for the standard lubricant, please select SO to order the gear unit without oil and then refer to the Lubricant table to select the correct oil for the application operating temperature range.
- **Gear unit housing and component resistance:** if the operating temperature is below -25°C, or above 50°C, please contact Bonfiglioli's Technical Service. From -25°C to -10°C, please start the gearmotor with partial loads.
- **Motor:** in case of special humidity and ambient temperature resistance requirements, please see the motor tropicalisation option.

To allow a proper heat dissipation, make sure the product is installed with adequate air circulation, away from temperature-sensitive components.

For altitude < 3000m and ambient temperature <50°C, these Gear Units thermal power is not a possible cause of fault. Should the product be operated under different conditions, please contact Bonfiglioli's Technical Service.

Rating values are calculated for standard environmental conditions (40°C; altitude<1000m a.s.l) as specified in CEI EN 60034-1.

Motors can be used within the temperature range of -15°C and +40°C as standard. For temperature higher than 40°C the rated power output should be adjusted by factors given in the table below.

Ambient temperature (°C)	40	45	50
k_{ft} coefficient	100%	95%	90%

Permitted power = $Pn_1 \cdot k_{ft} \cdot f_m$

For f_m refer to the Duty Cycle options

ENVIRONMENTAL CONDITIONS

Altitude

The installation altitude influences the gear unit and motor performance. For motor temperature derating data, see the **e-motor Configuration Guidelines & Setup** Catalogue Section.
If the application altitude is above 1500 m and the gear unit is factory filled with oil, place the product with the oil drain plug at the top and open it to balance out the internal pressure and the external atmosphere, then close the oil plug. Make sure that no object or substance falls into the gear unit, as it could damage its internal components during its operating lifetime.
If, during its lifetime, the gear unit operates with a difference of altitude higher than 1000 m, **contact Bonfiglioli's Technical Service** to find the correct solution, based on the required performance, the seals equipped and the mounting position needed.

Noise Level

Gear unit noise levels have been tested according to UNI ISO 3746. The noise of the gear unit is always lower than the motor's, which is compliant with the CEI EN 60034-9 standard.

Corrosion Protection

The gear unit and motors can be configured with several devices to enhance their protection against corrosion, see EVOX Painting Options against corrosion protection and FO option to add stainless steel components to your product.

Storage

See the Product Storage Guidelines on the EVOX user manual at www.bonfiglioli.com for a thorough description of every environment and treatment conditions (for less and more than 6 storage months).
Observe the following instructions to correctly store the products:

a) Do not store outdoors, in areas exposed to the weather or with excessive humidity.

b) always place wooden boards or other materials between the products and the floor.

The gear units should have no direct contact with the floor.

c) In case of long-term storage, all machined surfaces such as flanges, shafts and couplings must be coated with a suitable rust inhibiting product (Mobilarma 248 or equivalent).
In addition, the gear units must be placed with the filler plug at the top and filled up with oil.

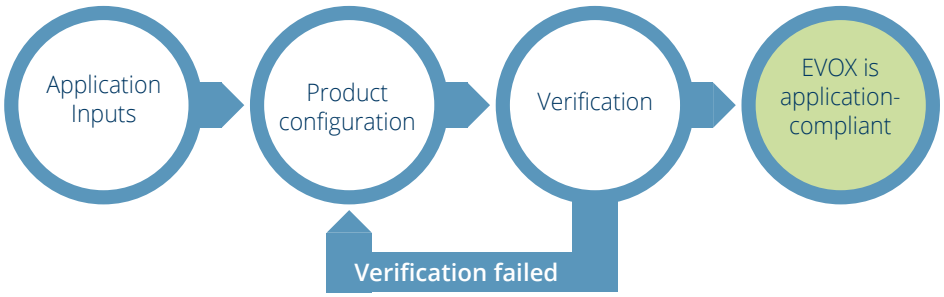
Before putting the units into operation, top-up with the appropriate quantity and type of oil (refer to the User's manual available at www.bonfiglioli.com).

Gear Unit Efficiency

For Helical In-Line gear units, consider as a general order of magnitude $0{,}98^{Nst}$ [Nst = stage number], for an efficient calculation.

PRODUCT SELECTION GUIDELINES

In order to correctly choose the product that fits your needs, please refer to the Application Input parameters listed below. Choose the configuration in the performance table, then verify your EVOX with the Verification parameters.



APPLICATION INPUTS

Some fundamental data are necessary to assist the correct selection of a gear unit or gearmotor. The table below briefly sums up this information.

To simplify selection, fill in the table and send a copy to Bonfiglioli Technical Service, which will select the most suitable gear unit for your application.

	Type of application	
P_{r2}	Output power at n_2	.....kW
M_{r2}	Output torque at n_2	.....Nm
n_2	Output speed	.....rpm
n_1	Input speed	.....rpm
R_{c2}	Radial load on output shaft	.....N
x_2	Load application distance (*)	.....mm
	Load orientation at input	..... 
	Output shaft rotation direction (CW-CCW) (**)	.....
R_{c1}	Radial load on input shaft	.....N
x_1	Load application distance (*)	.....mm
	Load orientation at input	..... 
	Input shaft rotation direction (CW-CCW) (**)	.....

A_{c2}	Axial load on output shaft (+/–) (***)	.....N
A_{c1}	Axial load on input shaft (+/–) (***)	.....N
J_c	Moment of inertia of the load	.....Kgm^2
t_a	Ambient temperature	.....C°
	Altitude above sea level	.....m
	Duty type to IEC norms	S...../.....%
Z_r	Startup frequency	.....1/h
	Motor voltage	V
	Brake voltage	V
	Frequency	.....Hz
M_b	Brake torque	.....Nm
	Motor protection degree	IP.....
	Insulation class	.....

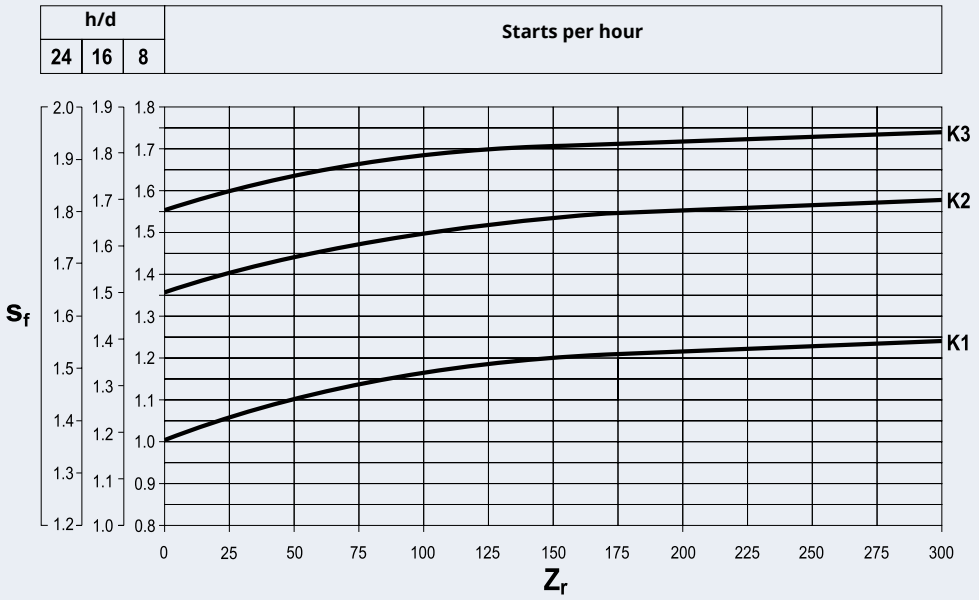
(*) Distance x1-2 refers to the distance between the point of force application and the shaft shoulder (if not indicated, the force acting at half the shaft extension will be considered).

(**) CW = clockwise; CCW = counter-clockwise

(***) + = push; – = pull

Application Service Factor

The Suggested Service Factor [S_f] is the ratio between the Nominal Table Torque [M_{r2}] and the Calculated Torque [M_{c2}] needed by your Application.



The [S_f] calculation depends on 3 factors in the previous diagram:

- **Start-up frequency** [Z_r]: this parameter **describes the gear unit start-ups per hour**
- **Daily work hours**: this parameter selects the y axis where you can check your Suggested Service Factor [S_f]
- **Mass acceleration factor** [**k..**]: this parameter describes the shock loads of your application on the Gear Unit and drives the fs curve selection

K1: Uniform Load	**K ≤ 0.25**	When $K = \frac{J_c}{J_m}$
K2: Moderate shock load	**0.25 < K ≤ 3**	
K3: Heavy shock load	**3 < K ≤ 10**	
K4: Contact Bonfiglioli's Technical Service	**K > 10**	

J_c = Driven masses moment of inertia reduced to the motor shaft

$J_c = J_a\left(\frac{1}{i^2}\right)$	J_a = Driven masses moment of inertia reduced to the gear unit output shaft **i** = Gear Ratio

J_m = EVOX e-motor moment of inertia reduced to the motor shaft

PRODUCT SELECTION GUIDELINES

GEAR UNIT SELECTION

Gear Unit Configuration

a) Determine Suggested Service Factor [S_f] according to type of duty (factor K), number of starts per hour [Z_r] and hours of operation.

b) From values of torque [M_{r2}], speed [n_2] and dynamic efficiency [ν_d] the required input power can be calculated from the equation:

$$P_{r1} = \frac{M_{r2} \cdot n_2}{9550 \cdot \eta_d} \text{ [kW]}$$

Value of [η_d] for the captioned gear unit can be sorted out from Gear Unit Efficiency paragraph.

c) Consult the gearmotor selection tables and refer to the appropriate rated power [P_n]:

$$P_n \geq P_{r1}$$

At the end consider a Gear Unit configuration within a Service Factor **S** that match or exceeds the Suggested Service Factor [S_f].

$$S = \frac{M_{n2}}{M_2} = \frac{P_{n1}}{P_1}$$

Unless otherwise specified, power [P_n] of motors indicated in the catalogue refers to continuous duty S1. For motors used in conditions other than S1, the type of duty required by reference to CEI 2-3/IEC 34-1 Standards must be mentioned.

For duties from S2 to S9 extra power output can be obtained with respect to continuous duty, see the "e-motor Configuration Guidelines & Setup" catalogue section.

Accordingly the following condition must be satisfied:

$$P_n \geq \frac{P_{r1}}{f_m}$$

The adjusting factor [f_m] can be obtained from table below.

Intermittence ratio

$$I = \frac{t_f}{t_f + t_r} \cdot 100$$

t_f = operating time under constant load

t_r = rest time

	Duration						
	S2			S3*			S4 - S9
	of the duty cycle [min]			Cycle duration factor [I]			Please contact us
	10	**30**	**60**	**25%**	**40%**	**70%**	
f_m	1.35	1.15	1.05	1.25	1.15	1.1	

* Cycle duration, in any event, must be 10 minutes or less. If it is longer, please contact Bonfiglioli's Technical Service

Next, refer to the appropriate [P_n] section within the gearmotor selection charts and locate the unit that features the desired output speed [n_2], or closest to, along with a Service Factor **S** that meets or exceeds the Suggested Service Factor [S_f].

The Service Factor is so defined:

$$S = \frac{M_{n2}}{M_2} = \frac{P_{n1}}{P_1}$$

Selection of speed reducer and gear unit with IEC motor adapter

a) Determine Suggested Service Factor [S_f].

b) Assuming the required output torque for the application [M_{r2}] is known, the calculation torque can be then defined as:

$$M_{c2} = M_{r2} \cdot S_f$$

c) The gear ratio is calculated according to requested output speed [n_2] and drive speed [n_1]:

$$i = \frac{n_1}{n_2}$$

Once values for [M_{c2}] and [**i**] are known consult the rating charts under the appropriate input speed [n_1] and locate the gear unit that features the gear ratio closest to [**i**] and at same time offers a rated torque value [M_{n2}] so that:

$$M_{n2} \geq M_{c2}$$

If a IEC motor must be fitted on the gear unit, check the geometrical compatibility with the gear unit in Gear units performance tables.

PRODUCT SELECTION GUIDELINES

VERIFICATION

After the selection of the speed reducer, or gearmotor, is complete it is recommended that the following verifications are conducted:

Thermal capacity

For altitude < 3000m and ambient temperature <50°C, these Gear Units thermal power is not a possible cause of fault. Should the product be operated under different conditions, please contact Bonfiglioli's Technical Service.

To allow a proper heat dissipation, make sure the product is installed with adequate air circulation, away from temperature-sensitive components.

Load Conditions on Gear Unit Shafts

Please shown in the Catalog Performances Table.

External Load Calculation on Gear Unit Shafts

External transmission could generate loads on the Gear Unit shafts.

The guidelines below are used to calculate the radial load.

This is a very simplified method to get the order of magnitude of the radial loads on the Gear Unit shafts. We recommend you follow more detailed considerations on your application to select the correct EVOX Gear Unit.

$$R_c = \frac{2000 \cdot M_a \cdot K_r}{d}$$

$K_r = 1$	$K_r = 1.25$	
$K_r = 1.5 - 2.0$	
M_a [Nm]	d [mm]	
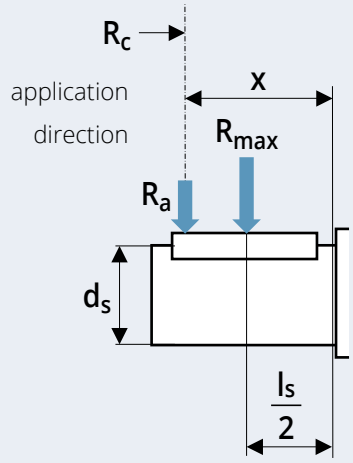
Position of the radial component on the gear unit shafts

Radial loads in performance tables are considered as applied in the middle of the shaft.

To compare the radial component of the force applied on the output shaft [R_c] with the value [R_{max}] specified in the performance tables, shift the line of action of [Rc] using the following formula so as to keep the stress on bearings unchanged.



$$R_a = R_{max} \frac{l_1}{l_2 + x}$$

The following formula needs to be verified:

$$R_a > R_c$$

Check values [l_1] and [l_2] in the following tables:

Coaxial Gear Unit Output Shaft								
Size	l1	l2	ds	ls	l1	l2	ds	ls
	[mm]				[in]			
07	87	67	20	40	3.425	2.638	3/4	1-9/16

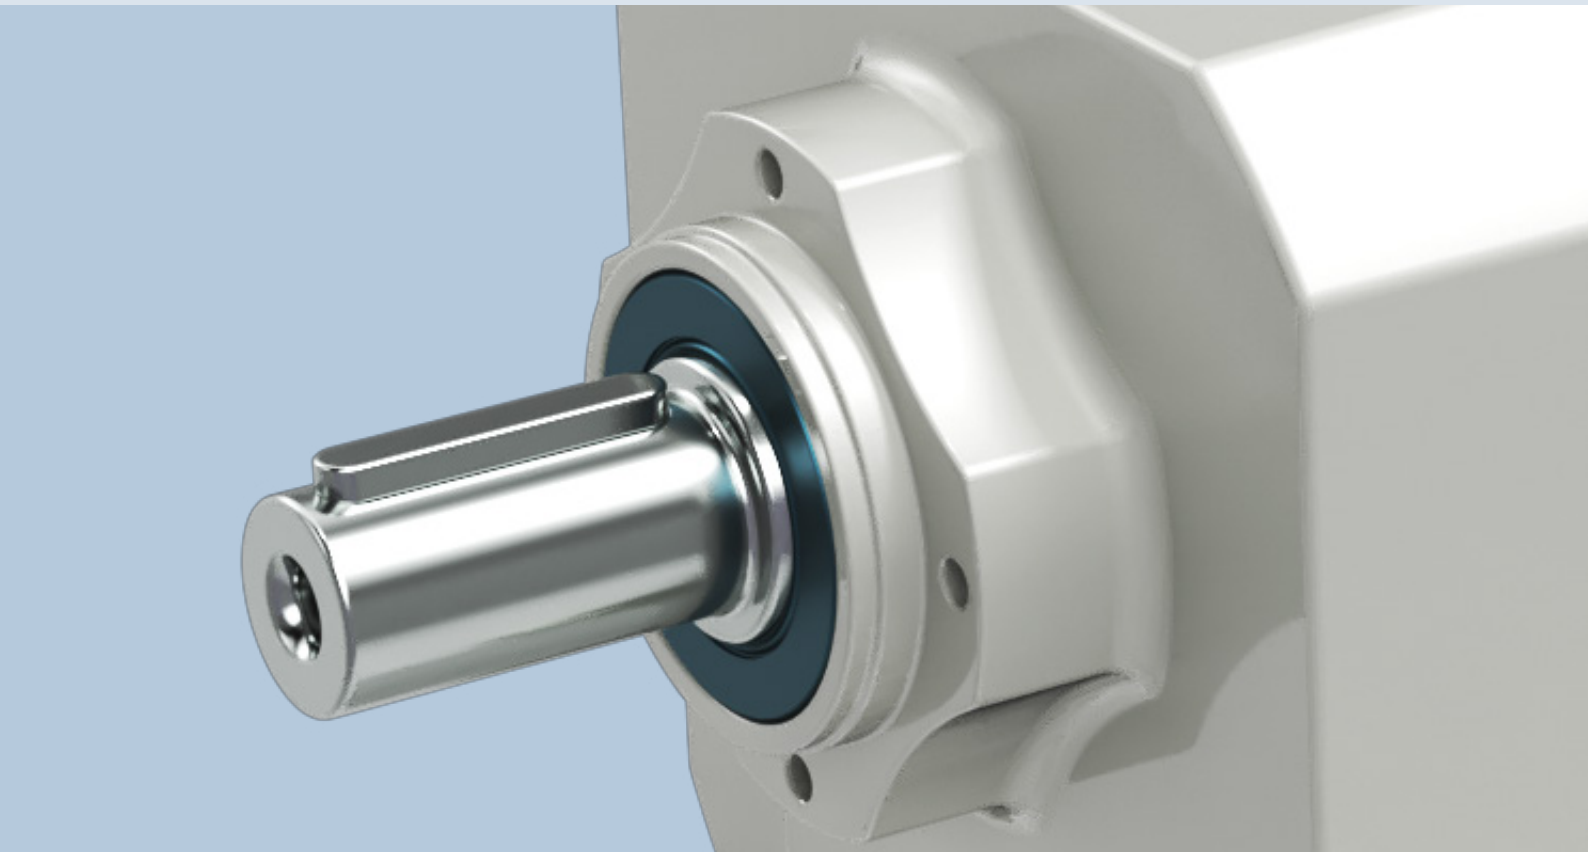
Axial Load on Shafts

If the force on the output shaft has both radial and axial components, contact Bonfiglioli's Technical Service and check if your solution is suitable.

COAXIAL GEARMOTOR & GEAR UNIT EVOX

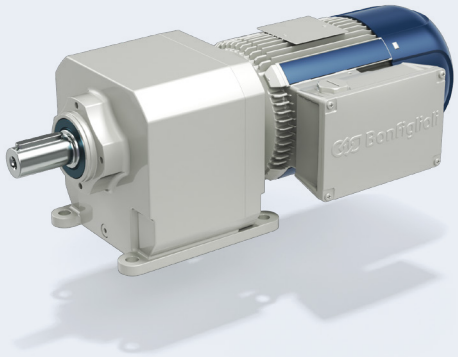


PRODUCT OVERVIEW

EVOX is Bonfiglioli's new gearmotor platform; the EVOX family starts with the new **CP**.

EVOX CP is a Helical In-Line product designed with a smooth housing and a performance/value focus.

The interface, aligned with the market standards, allows adapting EVOX CP to most existing industrial machines without the need for specific machining. Thanks to the wide range of versions/options and motors available in **Bonfiglioli's portfolio**, this new product can meet a wide range of application needs.



Features	Benefits
Overall dimensions in line with market standards	Fully interchangeable with market standards
Smooth surface	Easy-clean shape
Every mounting position available with the standard Product	Lower codes in stock
High torque density for in-line technology	High roughness and performances
Reinforced radial/axial bearing option	Product ready for decentralized transmission
Feet & flange output & long speed ratios	Product ready for pumps & compressors

EVOX CP sizes	Nominal torque	Gear ratio range	Max radial loads	Maximum compact gearmotor power	
	[Nm]		[N][1]	[kW]	[hp]
07	55	2.8-81.2	1470	0.37	0.5
17	100	2.4-85.9	2460	0.75	1
37	200	2.3-133	4110	1.5	2
47	335	2.4-172	5240	4	5.5
57	500				
67	650				

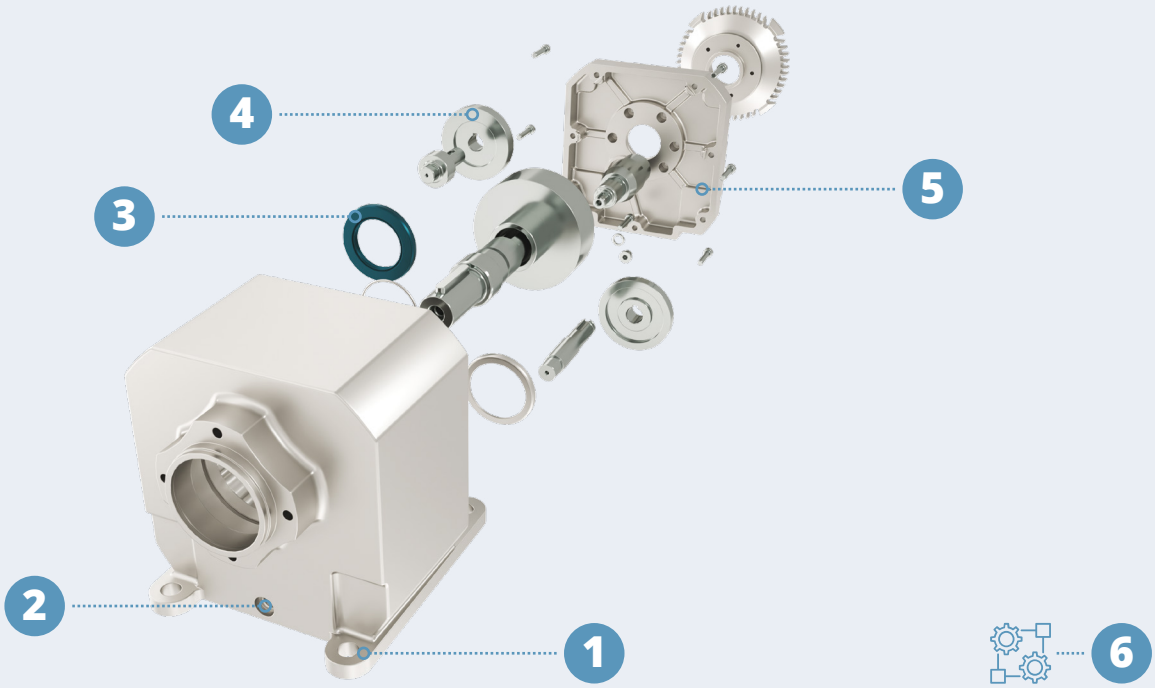
(1) Max performances @ 1400 rpm in input, Nominal output torque and radial load, applied in the middle of the o. shaft.

This value could change with the gear ratio

PRODUCT OVERVIEW

TECHNICAL FEATURES

Gear Unit – Coaxial CP



1 Overall dimensions in line with market standards

2 Every mounting position possible with one product

With its unique oil level, this gear unit can be fitted on any position.

3 Reliability focus for every standard component

Using more reliable components improves the reliability of the whole product.

4 Efficiency and low noise gears set

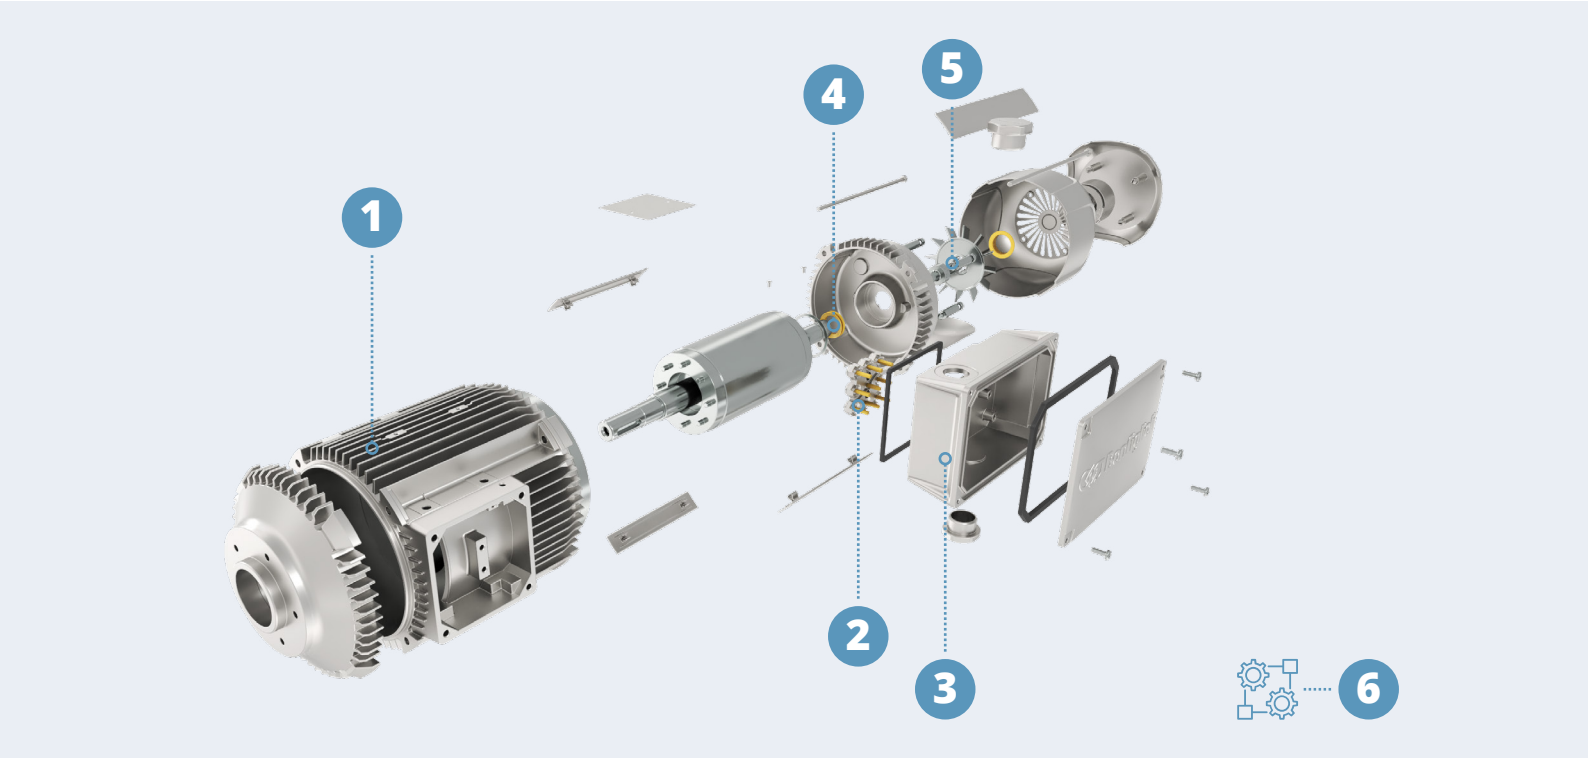
These highly effective gears reduce oil heating, preventing its leakage through the seals.

5 Product flexibility/modularity

Easy assembly with simple equipment.

6 Great set of versions and options

Electric Motor – MXN/MNN



1 Uncompromised IE3/NEMA Premium Efficiency

This motor is compliant with the most severe regulations in the world in terms of efficiency.

2 One motor for EU, USA, India & Australia

With its particular 9-PIN terminal box, you could get the right voltage for most markets.

3 Reliability focus for every standard component

Using more reliable components improves the reliability of the whole product.

4 Rotating terminal box

With this feature, you could rotate the terminal box in every position you need.

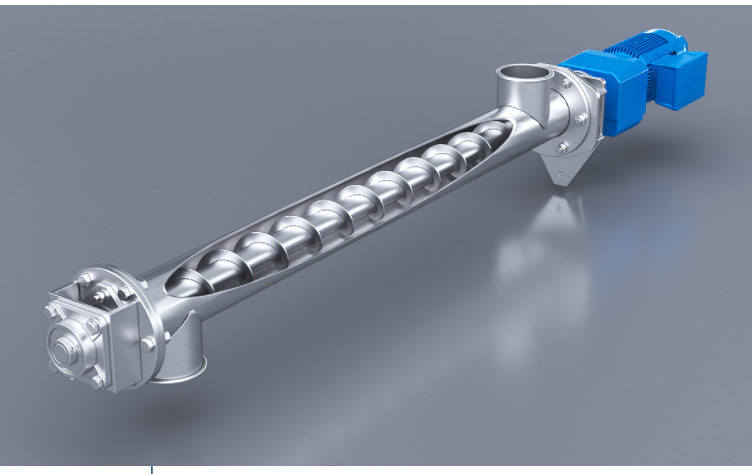
5 Modular brakes and encoders

6 Wide range of versions and options

PRODUCT OVERVIEW

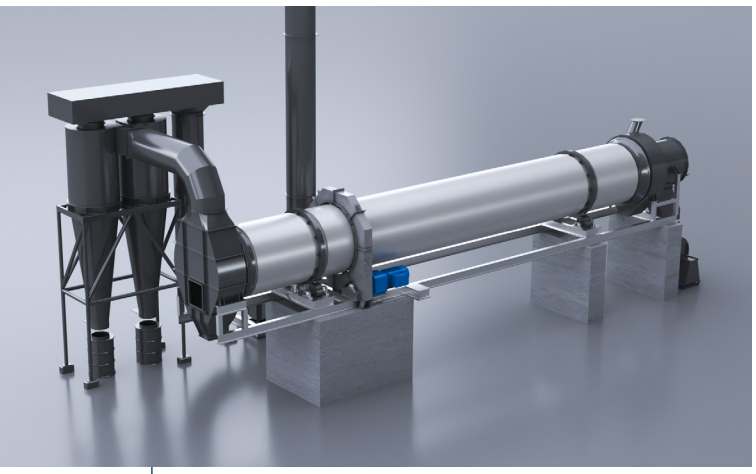
TARGET APPLICATIONS

- **Product fully interchangeable with market standard**
- **IE3/NEMA Premium uncompromised efficiency** making it technically ready for premium efficiency applications worldwide.



Options for high radial and axial loads making this product suitable for screw conveyors and/ or decentralized transmissions.

Compact design making it compatible even with severe application constraints.



Market Best-in-Class in terms of Torque making the product with the highest torque density of its category.

AUTOMATIC GATES & BARRIERS

MOUNTING POSITIONS

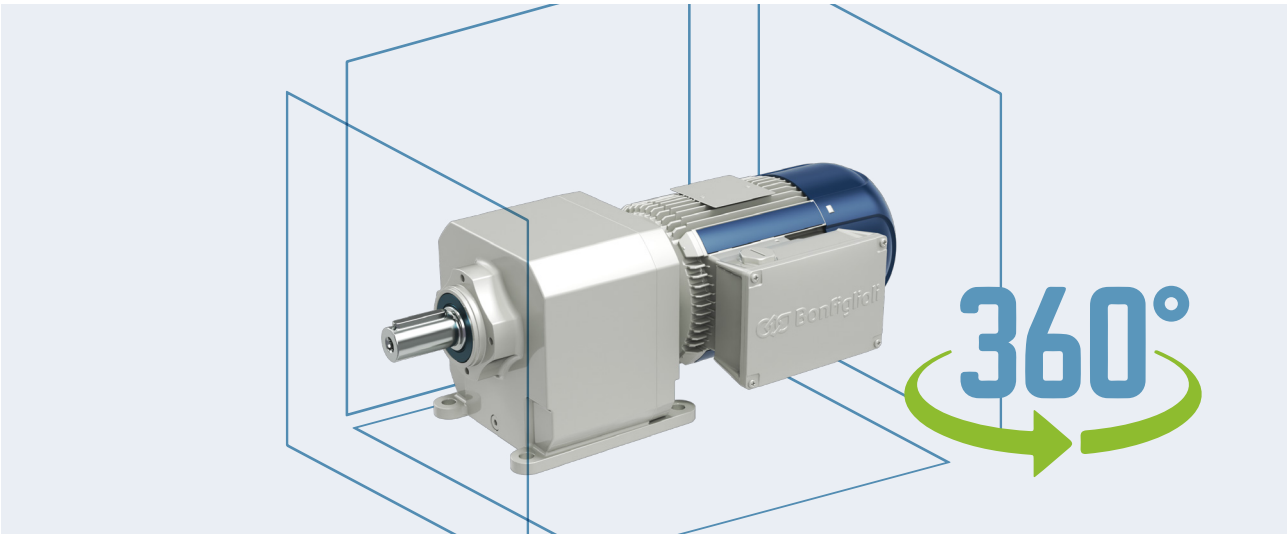
Gear Unit – Coaxial CP

Every mounting position possible with one code

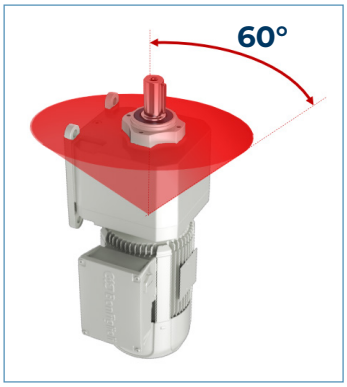
Thanks to the enhanced performances and the reliability of components, this gear unit can be mounted in every possible position as standard.

EVOX CP is supplied with a long-life oil fill and a single level for every possible mounting position. By selecting the SO option, the gear unit is shipped by Bonfiglioli without oil and can be filled by the customer, using a special plug.

This feature can increase the flexibility of your design and allow you to install this product in any possible position.



Mounting position limitations

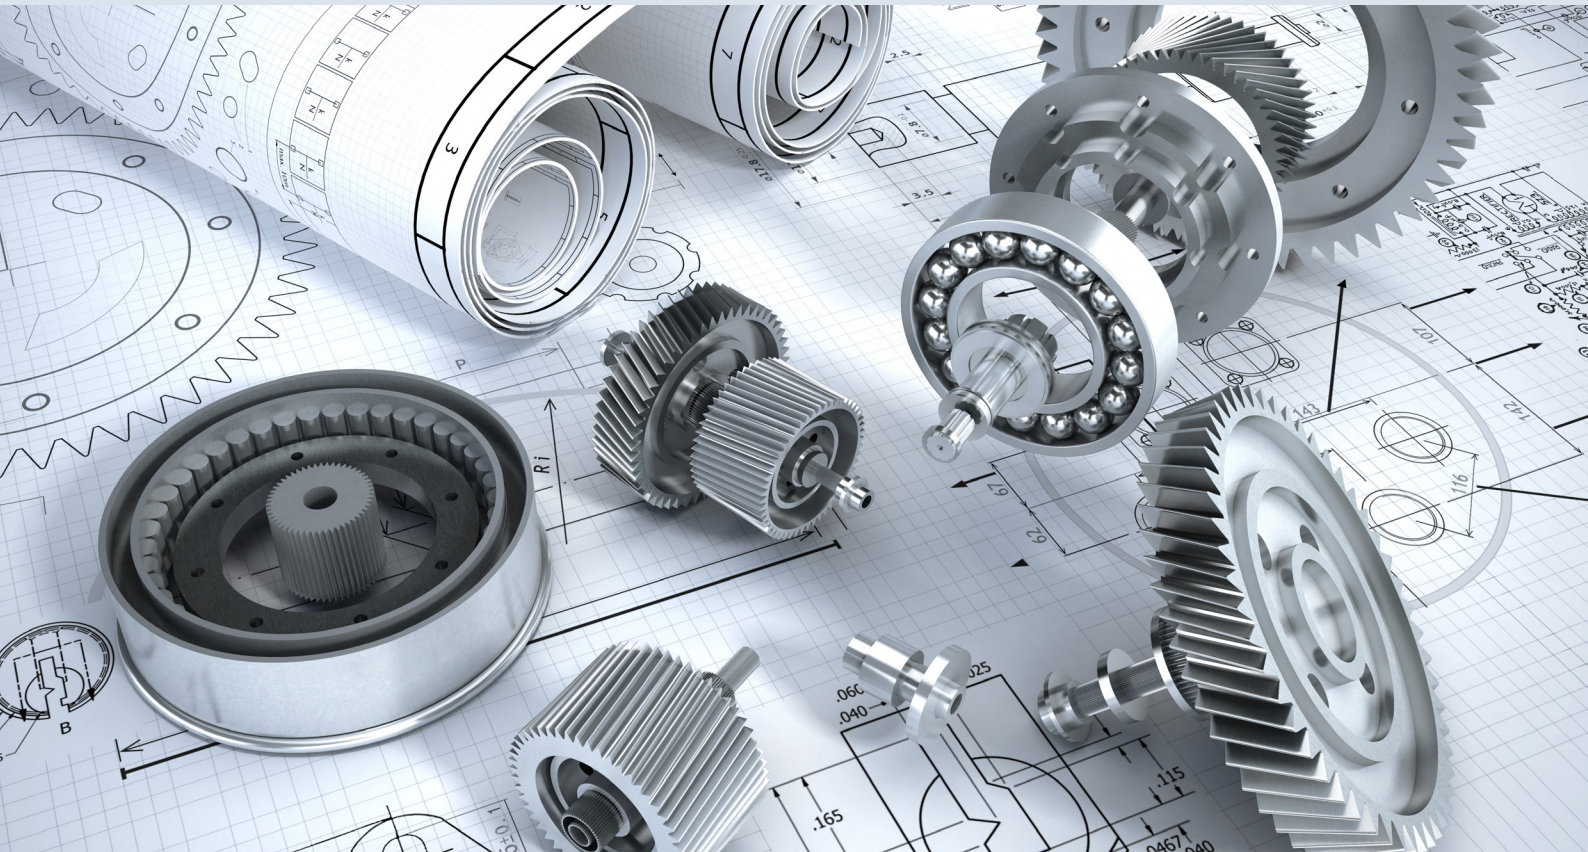


Reinforced output bearings option [OHA - OHR]

If you need EVOX CP with both:

- OHR or OHA

- vertical position with the output shaft up, or a position within 60° of it, facing any direction, contact Bonfiglioli's Technical Service and check whether the standard oil level is correct for your application or if a customised solution is required.



PERFORMANCE

PERFORMANCE

EVOX COAXIAL GEAR UNIT

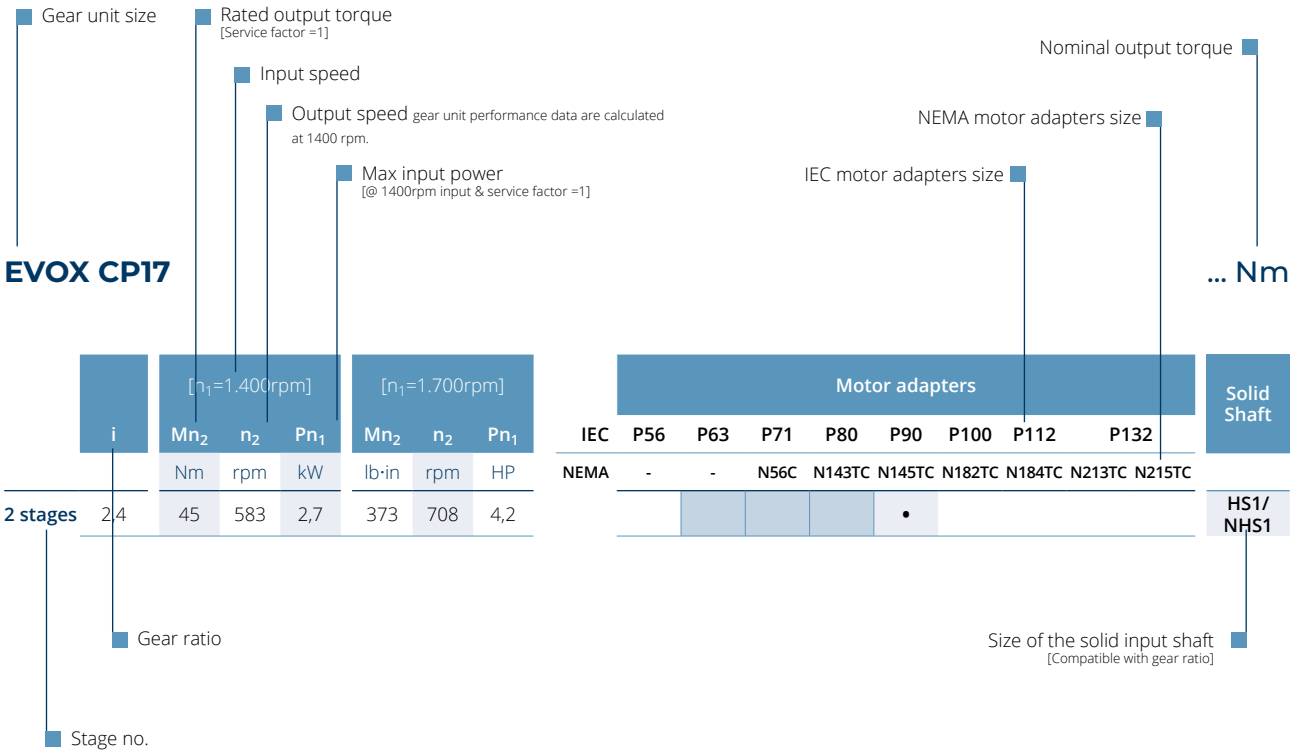
Tables introduction

The following tables show geometrically possible combinations between gear ratios and inputs for each gear unit size.

For each of these combinations, a possible service factor has been calculated using the maximum motor power that can be coupled in Bonfiglioli's asynchronous electric motors portfolio (considering different poles and efficiency levels).

In the table, combinations with a service factor below 0.9 are highlighted with a lighter colour. Here you should pay attention to the power of the electric motor coupled with the gear unit, because it shouldn't exceed the "Maximum input power" shown.

The left table section shows the inputs that are geometrically compatible with each gear ratio by IEC, NEMA and solid input shaft. For further information on the input interface, see the Dimension section of this document.



Adapter can be coupled

Adapter can be coupled [Input power should not exceed the "Max input power"]

• Adapter can be coupled in NEMA version only. [Input power should not exceed the "Max Input power"]

Adapter cannot be coupled

Please, configure N140TC, to have the N143TC or N145TC input flange; or configure N180TC, if you want the N182TC or N184TC; or select N210TC, to have the N213TC or N215TC

■ Adapter can be coupled

□ Adapter can be coupled [Input power should not exceed the "Max input power"]

• Adapter can be coupled in NEMA version only. [Input power should not exceed the "Max Input power"]

— Adapter cannot be coupled

Please, configure N140TC, to have the N143TC or N145TC input flange; or configure N180TC, if you want the N182TC or N184TC; or select N210TC, to have the N213TC or N215TC

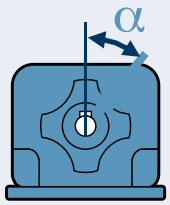
PERFORMANCE

EVOX COAXIAL OUTPUT RADIAL AND AXIAL LOADS

Tables introduction

Max radial loads are calculated with:

- M_{n2} torque applied on output shaft
- most unfavourable gear unit rotating direction [CW or CCW]
- the applied radial force with the most unfavourable **α** angle, among all gear ratios
- radial load applied in the middle of the output shaft



The permitted radial loads can increase considerably when the parameters listed above vary. contact Bonfiglioli's Technical Service if your application requires radial loads greater than the values indicated in the tables, because they could be available with a standard gear unit or with a simple option

Axial load values are not dependent on the service factor or output speed, but are referred to pure axial forces applied with inward direction in the gear unit direction. If the force on the output shaft has both radial and axial components or the direction of the force is outgoing from the gear unit, contact Bonfiglioli's Technical Service.

• contact Bonfiglioli's Technical Service

OPTIONS | AVAILABLE FOR EVOX COAXIAL GEAR UNIT

OPTION DETAIL

Lubricant

EVOX CP gear units are supplied **lubricated for life** with Shel Omala S4 WE320 (PAG) synthetic oil.
It is recommended to carry out monthly oil level checks if the gear unit works at intermittent duty.
If the gear unit works at continuous duty, more frequent checks are recommended.
In both cases, top up if lubricant level is low.
The following additional variants are available:

Synthetic oil variants

LU	**Synthetic Oil PAO ISO VG 150**	**LH**	**Synthetic Oil PAG ISO VG 150**
LY	**Synthetic Oil PAO ISO VG 220**	**LS**	**Synthetic Oil PAG ISO VG 220**
LV	**Synthetic Oil PAO ISO VG 320**	**LK**	**Synthetic Oil PAG ISO VG 460**
LW	**Synthetic Oil PAO ISO VG 460**		

Mineral oil variants

LI	**Mineral Oil ISO VG 320**	**LN**	**Mineral Oil ISO VG 150**
LJ	**Mineral Oil ISO VG 460**	**LZ**	**Mineral Oil ISO VG 220**

Mineral oil can be used in gearmotors with service factor S ≥ 1.3

Edible oil variants

LA	**Food grade Oil H1 ISO VG 150**	**LC**	**Food Grade Oil H1 ISO VG 320**
LB	**Food Grade Oil H1 ISO VG 220**	**LD**	**Food Grade Oil H1 ISO VG 460**

When configuring LA, LB, LC and LD variants, the gear unit will be filled with oils compatible with the area of incidental contact with products and packaging materials from the food, cosmetics, pharmaceutical and feed industries. These lubricants are NSF H1 approved, FDA 21 CFR § 178.3570 compliant and ISO 21469 certified.
For the use of these oils, further risk analysis (e.g. HACCP) is recommended to validate the technical solution.

Oil-free variant

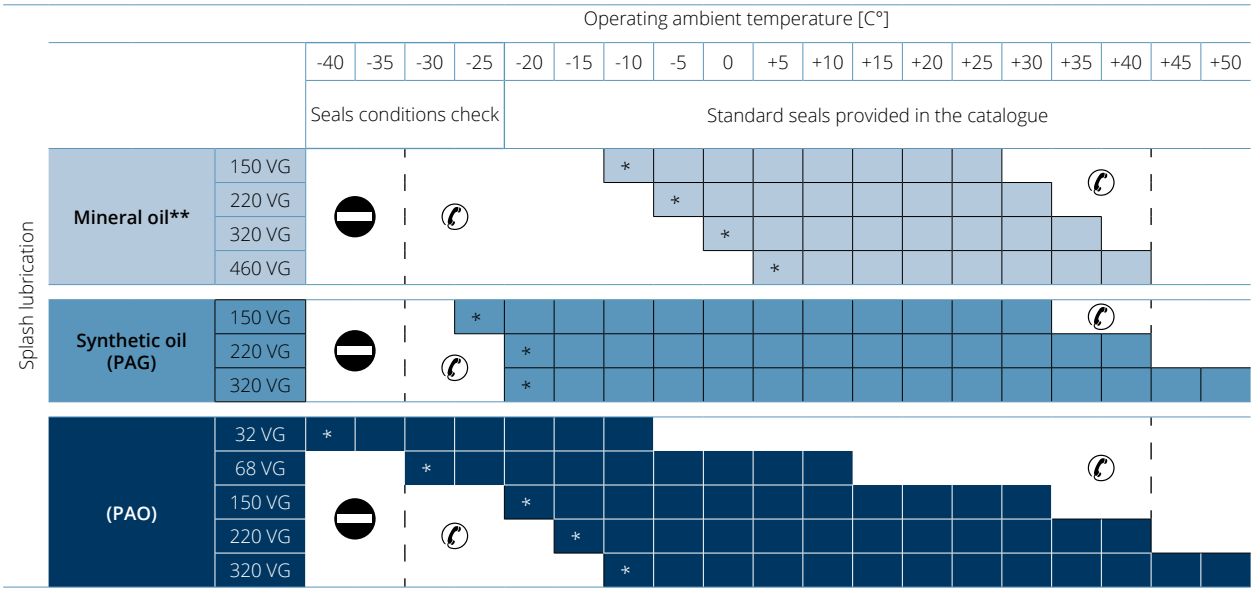
SO **Without oil fill**

When configuring SO option, gear units are supplied without lubricant.

The oil quantity for each gear unit size is:

Size	Volume (L)
07	0,35
17	0,7
37	1,1
47	1,8

The gear unit can be filled with different oils, according to the application needs.
Refer to the following table to identify correct viscosity according to the operating temperature of the gear unit.



Recommended operating limits.

Allowed operating limits. ✆

Forbidden operating limits.

✆ If needed, and in the event of impulse loads, contact Bonfiglioli's Technical Service.

* For temperatures that are too low, the density of the oil is high enough that there is a risk of damaging the gearbox and the motor. Therefore, it is highly recommended to provide an adequate starting ramp

** Mineral oil can be used in gearmotors with service factor S ≥ 1.3

ATTENTION

- **Bonfiglioli's factory filled gear units should not be operated outside the temperature range indicated in this catalogue.**
- **Bonfiglioli shall not be liable for use of lubricants outside the suggested temperature range or mixtures of different lubricant types or manufacturers.**
- **Oils with the same viscosity and different brands may have different characteristics in terms of operating temperature ranges. The table above provides a general indication; it is therefore recommended to carefully check the technical specifications of the oil before topping up and using EVOX gear units.**
- **If filling is to be carried out, do not mix synthetic and mineral oils and/or different brands.**
- **Do not let the oil temperature drop below the pour point -39°C or rise above 100°C, also in storage conditions.**
- **Always refer to the User's Manual available at www.bonfiglioli.com for further indications concerning any periodic oil check and replacement.**

OPTIONS | AVAILABLE FOR EVOX COAXIAL GEAR UNIT

OPTION LIST DEEP DIVE

Oil seals

Gear Units are supplied as standard with a Viton Seal in input and a single lip NBR Seal in output.

Suggested versions:

Ambient temperature Type of recommended seal	Below -25°C **CTS**	From -25°C to 0°C **PN**	From 0°C to 35°C **Standard**	From 35°C to 50°C **PV**	Over 50°C **CTS**

CTS = contact Bonfiglioli's Technical Service

PV

Viton input and output seals

With this option active, Gear Units are supplied with Viton seals both in input and output.

PN

NBR output & input seals

With this option active, Gear Units are supplied with NBR seals both in input and output.

Output lip seals

Gear Units are supplied as standard with a single output lip seal.

DL

Double lip seal

With this option active, Gear Units are supplied with a double lip NBR seal in output.

Select with this option also "PV", if you want the double lip Viton seals in output.

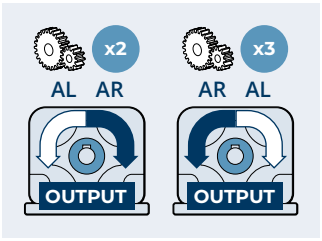
Gear unit backstop – Only for HS../NHS.. inputs

Gear units can be supplied with a backstop in case of HS input. For gearmotor backstops, see the Motor Option List. Be mindful that the Clockwise [CW] and Counter-clockwise [CCW] rotation option of the output shaft depends on the gear unit stage number.

AR/AL

Free right/left rotation backstop

- **AR:** free right rotation
- **AL**: free left rotation



Output reinforced bearings

Gear units are supplied with strong and reliable ball bearings as standard; however, if your application requires higher performance, you can choose reinforced bearings in output with the following options.

OHR

Enhanced radial load capacity

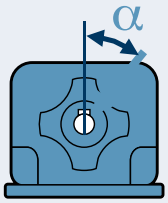
With those bearings, the radial loads at the gear unit output would be increased. This is the right solution for a decentralized (belt and pulley) or a chain-pinion transmission. The values listed in the following table are the rated ones and may vary based on output speed and service factor. Refer to the Performance Table with Output Radial Load, to choose the right bearing for your application.

		CP07	CP17	CP37	CP47	CP57	CP67
Maximum allowed pure radial loads [N]	**Standard version**	1470	2460	4110	5240	Coming soon	
	OHR option	1640	3460	6580	8420		

Parameters are calculated with the following criteria:

- [M_{n2}] torque applied on output shaft
- most unfavourable gear unit rotating direction [CW or CCW]
- the applied radial force with the most unfavourable α angle, among all gear ratios
- radial load applied in the middle of the output shaft

The permitted radial loads can increase considerably when the parameters listed above vary. contact Bonfiglioli's Technical Service if your application requires radial loads greater than the values indicated in the tables, because they could be available with a standard gear unit or with a simple option



OHA

Enhanced axial load capacity

With those bearings, the axial loads at the gear unit output would be increased. This is the right solution for axial pumps or screw conveyors. Maximum axial load values are listed below:

		CP07	CP17	CP37	CP47	CP57	CP67
Maximum allowed pure axial loads [N]	**Standard version**	2370	3270	5600	7650	Coming soon	
	OHA option			15000	20000		

CTS = contact Bonfiglioli's Technical Service

These values do not depend on Service factor or output speed but are referred to pure axial forces in the Gear Unit direction. If output shaft has both radial and axial forces or the direction of the force is outgoing from the gear unit, contact Bonfiglioli's Technical Service

OPTIONS | AVAILABLE FOR EVOX COAXIAL GEAR UNIT

OPTION LIST DEEP DIVE

Input reinforced bearings – Only for HS../NHS.. inputs

Gear units are supplied with strong and reliable ball bearings as standard; however, if your application has different requirements, we can supply:

IHB

Input reinforced bearings

With those bearing, the radial loads capacity in input of the gear unit could be enhanced. This is the right solution for a decentralized (belt and pulley) or a chain-pinion transmission.
To select the most suitable solution, contact Bonfiglioli's Technical Service

Reduced backlash

RB

Reduced backlash

With this option active, Gear Units are supplied with a reduced angular backlash compared to the standard version.

Stainless steel gear unit components

FO

Stainless steel output shaft and gear unit components

To increase the life and reliability of the gear unit in wet or aggressive environments, this option includes the following stainless steel components:
- Output shaft
- Output flange fixing screws
- Solid input shaft for HS configurations
- Gear unit nameplate
- Oil filler cap
- Housing locking screws for CP07
- Housing locking screws for CP17-47 in steel with zinc flake coating

BACK TO OPTION LIST

Painting option

RAL5010

RAL painting

Gear units with optional protection to class C3 or C4 are available in the colours listed in the following table.

Painting	Colour	RAL number
RAL7042 *	Traffic Grey A	7042
RAL5010	Gentian Blue	5010
RAL9005	Jet Black	9005
RAL9006	White Aluminium	9006
RAL9010	Pure White	9010
RAL7035	Light Grey	7035
RAL7001	Silver Grey	7001
RAL7037	Dusty Grey	7037
RAL5015	Sky Blue	5015
RAL5024	Pastel blue	5024

** gear units are supplied in this standard colour if no other colour is specified.*

NOTE: "**Paint**" options can only be specified in conjunction with "**Surface protection**" options.

C3

Surface protection class

When no specific protection class is requested, the surface of the gear units is by default at least equivalent to class C2 (UNI EN ISO 12944-2). For a higher degree of protection, the gear units can be supplied with a class **C3** and **C4** painting.

Surface protection	Typical environments	Maximum surface temperature	Corrosion class according to UNI EN ISO 12944-2
C3	Urban and industrial environments with up to 100% relative humidity (average air pollution)	120 °C	C3
C4	Industrial areas, coastal areas, chemical plants, with up to 100% relative humidity (high air pollution)	120 °C	C4

gear units with optional protection class **C3** or **C4** are available in a choice of colours.

Gear units can also be supplied with surface protection class **C5** according to UNI EN ISO 12944-2.

contact Bonfiglioli's Technical Service for further details.

Certificates

ACM

Motor certificate of compliance

The document certifies the compliance of the product with the purchase order and the construction in conformity with the applicable procedures of Bonfiglioli's Quality System.

CC

Inspection certificate

The document entails checking the order compliance, visual inspection of external conditions and instrumental testing of the electrical characteristics in unloaded conditions. Inspected units are sampled within the shipping batch and marked individually.

OPTIONS | AVAILABLE FOR EVOX COAXIAL GEAR UNIT

OPTION LIST DEEP DIVE

Explosion Proof Gear Unit

EX

ATEX 2014/34/EU - 2D/2G T4 (135 °C)

With this option active, the gear unit can be installed in Ex 1 and 21 areas (categories 2G and 2D).

The temperature class is T4 (max 135°C).

To comply with this particular environment, Gear Units are equipped with:

- Service plugs for periodic lubricant level checks
- Factory-charged with lubricant (synthetic oil)
- Fluoro elastomer seal rings as standard
- Nameplate indication of the product category and type of protection
- Components that can operate above the max temperature indicated as a limit in the regulation
- Temperature indicator supplied with each unit

The unique oil level allows you to fit EVOX CP in any of the positions with a single product code, as the standard version.

Moreover, the oil quantity is the same as in the standard version, please see the **oil fill table** for further information.

For the choice of an "EX" Gear Unit, the Mn2 (nominal torque) is the same as indicated in the Gear Unit Performance Table, except for the following configurations with HS version:

	i	[n_1=1,400rpm] Mn_2	n_2	Pn_1	Solid Shaft
CP17		Nm	rpm	kW

	4.4	131	322	4.4	
	4.9	137	285	4.1	
	5.5	148	256	4.0	
	6.4	156	219	3.6	
	7.1	161	197	3.3	
	8.0	166	176	3.1	

For further information refer to the user manual at www.bonfiglioli.com for compliant maintenance procedures.

Explosive atmosphere

An explosive atmosphere, for the purposes of Directive 2014/34/EU, is defined as a mixture:

a. of flammable substances, in the form of gases, vapours, mists or dusts;

b. with air;

c. under atmospheric conditions;

d. in which, after ignition, combustion spreads to the entire unburned mixture (sometimes, mainly with dust, the combustion does not consume the whole quantity of combustible material).

For further information refer to the user manual at www.bonfiglioli.com for compliant maintenance procedures.

An atmosphere that could become explosive due to local and/or operational conditions is called a potentially explosive atmosphere.

European harmonized Atex standards

Directive 2014/34/EU stipulates the minimum safety requirements for products intended for use in explosion risk areas within the member countries of the European Union.

The directive also assigns such equipment to categories, which are defined by the directive itself.

The following table describes the zones into which the user of a plant, in which an explosive atmosphere may occur,is required to divide the equipment application areas.

Zones		Frequency of formation of a potentially explosive atmosphere	Hazard Types
Gaseous atmosphere G	Dusty atmosphere D		
0	**20**	Present continuously or for long periods	Permanent
1	**21**	Likely to occur occasionally under normal operating conditions	Potential
2	**22**	It is not likely to occur in normal operations, but if it does, it will only persist for short periods	Minimum

BONFIGLIOLI RIDUTTORI gear units selected in this catalogue are suitable for installation in zones 1, 21, highlighted in light grey in the above diagram, and are also suitable for installation in areas with a lower level of protection (areas 2 and 22).

As from 20 April 2016 the ATEX directive 2014/34/EU come into force throughout the entire European Union, and replace existing conflicting national and European laws on explosive atmospheres and the previous directive 94/9/EC.

It should be emphasised that, for the first time, the directives also govern mechanical, hydraulic and pneumatic equipment, and not only electrical equipment as has been the case so far.

With regard to the Machinery Directive 2006/42/EC it should be noted that directive 2014/34/EU is a set of extremely specific requirements dedicated to the dangers deriving from potentially explosive atmospheres, whereas the Machinery Directive contains only very general explosion safety requirements (Annex I).

Consequently, as regards protection against explosion in potentially explosive atmospheres, Directive 2014/34/EU takes precedence over the Machinery Directive.

The requirements of the Machinery Directive apply to all other risks regarding machinery.

OPTIONS | EVOX COAXIAL GEAR UNIT

MORE ON OPTIONS LIST

Levels of protection for the various categories of equipment

The various categories of equipment must be able to operate in conformity with he Manufacturer's operational specifications, at certain defined levels of protection.

The availability of BONFIGLIOLI RIDUTTORI products is highlighted in grey.

Level of protection	Category		Protection type	Operating conditions
	Group I	Group II		
Very high	M1		Two independent protection or safety devices that can operate even at the occurrence of two independent faults.	The equipment remains powered and functional even in the presence of an explosive atmosphere.
Very high		1	Two independent protection or safety devices that can operate even at the occurrence of two independent faults.	The equipment remains powered and operational in areas 0, 1, 2 (G) and/or areas 20, 21, 22 (D).
High	M2		Protection suitable for normal operation and severe conditions.	The power supply to the equipment is interrupted in the presence of a potentially explosive atmosphere.
High		2	Protection suitable for normal operation and frequent failures or equipment where malfunctioning is normal.	The equipment remains powered and operational in areas 1, 2 (G) and/or areas 21, 22 (D).
Normal	2	3	Protection suitable for normal operation.	The pieces of equipment remain powered and operational in areas 2 (G) and/or areas 22 (D).

Group definition

Group I Applies to equipment intended for use underground work in mines and their surface installations, exposed to the risk of firedamp and/or combustible dust being released.

Group II Applies to equipment intended for use in other environments in which explosive atmospheres are likely to occur.

BONFIGLIOLI RIDUTTORI products may not therefore be installed in mines, classified in Group I and in Group II, category 1.

To summarise, the classification of equipment in to groups, categories and zones is illustrated in the table below, where by the availability of BONFIGLIOLI RIDUTTORI products is highlighted in grey.

	Group I		Group II					
Group	Mining, firedamp		Other potentially explosive areas (gas, dust)					
Category	M1	M2	1		2		3	
Atmosphere			Gas	Dust	Gas	Dust	Gas	Dust
Areas			0	20	1	21	2	22
Gear unit protection type					Ex h Gb	Ex h Db	Ex h Gc	Ex h Dc

The products described here in conform to the minimum safety requirements of European Directive 2014/34/EU, which is part of the directives known as ATEX (ATmosphères EXplosibles).

BACK TO
OPTION LIST

Certificate of conformity

The Certificate of conformity, is the document certifying conformity of the product to Directive 2014/34/EU.

The validity of the Declaration is bound to observance of the instructions given in the User, Installation and Service Manual for safe use of the product throughout its service life. Users can download it at www.bonfiglioli.com.

The instructions regarding ambient conditions are of particular importance inasmuch as failure to observe them during operation of the product renders the certificate null and void.

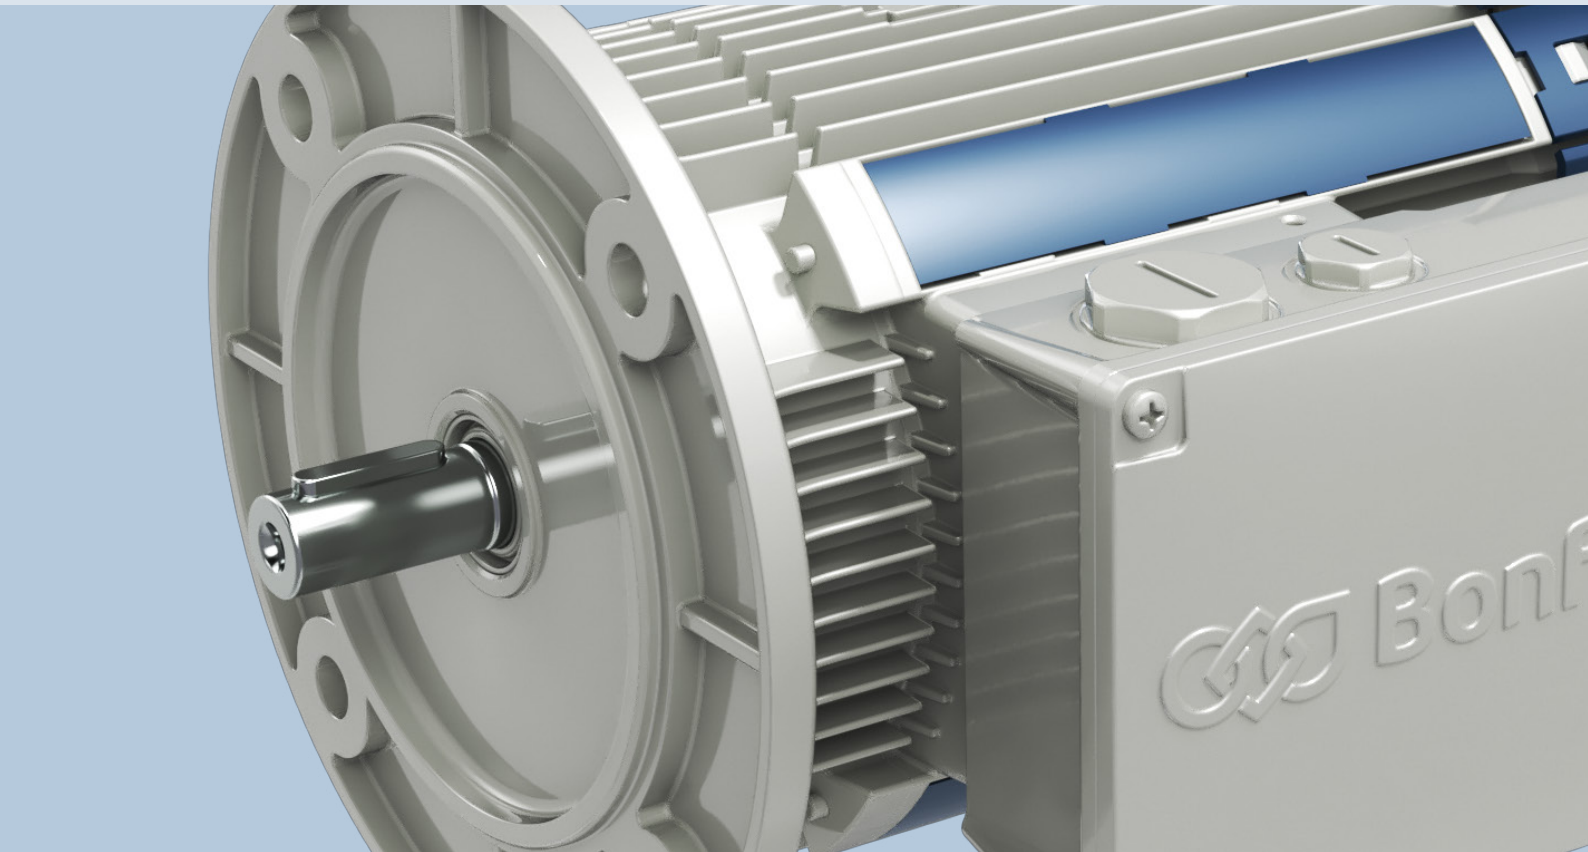
In case of doubt regarding the validity of the certificate of conformity, contact the BONFIGLIOLI RIDUTTORI technical department.

Compatibility with other options

The following options cannot be selected in combination with the ATEX variant:

- Output shafts N in inches
- Compact inputs (S05...S35)
- Solid inputs in inches (NHS1...NHS3)
- NEMA inputs (N56...N215)
- Lubrication option (SO, LA...LY)
- Option on PN seals
- AR, AL backstop options
- Reinforced output bearing options (OHR, OHA)
- FO option
- C3-C4 painting options (any RAL colour)

ELECTRIC MOTOR EVOX



PRODUCT OVERVIEW

BONFIGLIOLI PORTFOLIO

EVOX BXN, MXN and MNN are asynchronous low voltage (<1000V) e-motors and brake motors, developed in the sign of modularity, efficiency and reliability.

The aim of this product is to be compliant with your needs, both in standalone version and in a compact coupling with Bonfiglioli Gear Units.

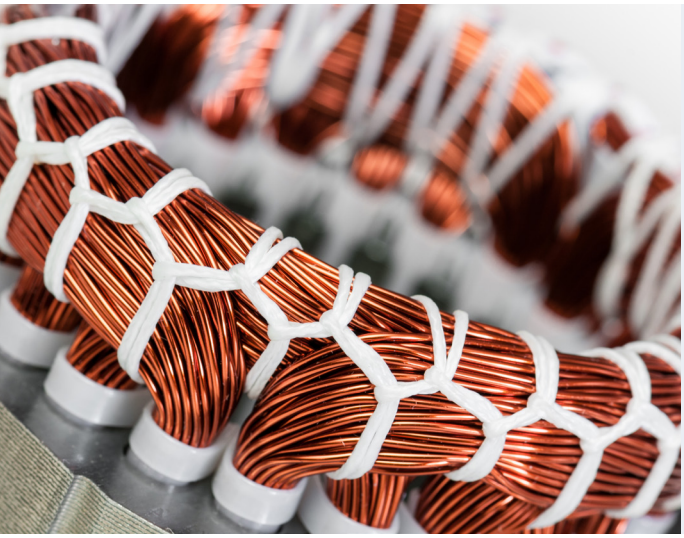
PRODUCT OVERVIEW

BONFIGLIOLI PORTFOLIO

The Motor and Inverter in Bonfiglioli History



In the 1990s, Bonfiglioli integrated its gear unit design within the product portfolio and the know-how of an important local company, and started designing its own electric motors to create robust and efficient gearmotors.

In recent years Bonfiglioli has integrated its offer with servomotors and reluctance motors. In 2001, with the acquisition of Vectron, it began to design and manufacture inverters, thus becoming a **Solution Provider**.

PRODUCT OVERVIEW

STANDARDS & DIRECTIVES

European standard

Standards

EVOX platform motors are manufactured according to the following standards:

EN	IEC	Standard description
EN 60034-1	IEC 60034-1	Rating and performance
EN 60034-2-1	IEC 60034-2-1	Standard methods for determining losses and efficiency from tests
EN IEC 60034-5	IEC 60034-5	Degrees of protection provided by the integral design of rotating electrical machines (IP code) - Classification
EN 60034-6	IEC 60034-6	Methods of cooling (IC Code)
EN IEC 60034-7	IEC 60034-7	Classification of types of construction, mounting arrangements and terminal box position (IM Code)
EN 60034-8	IEC 60034-8	Terminal markings and direction of rotation
EN 60034-9	IEC 60034-9	Noise limits
EN 60034-11	IEC 60034-11	Thermal protection
EN 60034-12	IEC 60034-12	Starting performance of single-speed three-phase cage induction motors
EN IEC 60034-14	IEC 60034-14	Mechanical vibration of certain machines with shaft heights 56 mm and higher - Measurement, evaluation and limits of vibration severity
EN 60034-30-1	IEC 60034-30-1	Efficiency classes of line operated AC motors (IE code)
EN IEC 63000	IEC 63000	Technical documentation for the assessment of electrical and electronic products with respect to the restriction of hazardous substances

Main directives

BXN, MXN and MNN motors meet the requirements of Directives 2014/35/EU (LVD - Low Voltage Directive), the 2014/30/EU (EMC - Electromagnetic Compatibility Directive), the 2009/125/EC (ERP - Energy Related Products Directive) and 2011/65/EU (RoHS – Restriction of Hazardous Substances) and their nameplates bear the CE mark.

As for the EMC Directive, construction is in accordance with standards EN 61000-6-2 (Generic standards - Immunity for industrial environments), EN 61000-6-4 (Generic standards - Emission standard for industrial environments).

This product should not be mixed with general household waste.

Disposal has to be carried out in conformity with Directive 2012/19/EU, where established, and in accordance to national regulations. They should be disposed of in accordance with any other legislation in force through the country.

Capacitive filter

Motors with FD brakes, when fitted with the suitable capacitive filter at rectifier input (option CF).

Ventilation

Motors are externally ventilated (IC 411) according to EN 60034-6 and are equipped with a plastic cooling fan working in both directions.

Motors must be installed allowing access for maintenance purposes on motor and brake, if supplied. For other cooling devices, please see the options section in this catalogue.

Noise
Noise levels, measured using EN ISO 1680, within the maximum levels specified in standard EN 60034-9.

Vibration balancing
Rotor shaft is balanced with half key fitted, and falls within vibration class N, as standard EN 60034-14.

The responsibility for final product safety and compliance with applicable directives rests with the manufacturer or the assembler who incorporate the motors as component parts.

Other international requirements

BXN, MXN and MNN motors can be sold in the most important markets worldwide such as Europe, UK, USA, Canada, China, Brazil, India, Russia, Australia and New Zealand.

UKCA conformity
BXN, MXN and MNN motors comply with the directives applicable in the United Kingdom, and carry the nameplate with the UKCA logo (United Kingdom Conformity Assessed mark).

EAC conformity
All Bonfiglioli motors comply with the EAC (EurAsian Conformity) regulations of the Eurasian Economic Customs Union of Russia, Kazakhstan and Belarus.

GEMS and EECA conformity
BXN, MXN and MNN motors meet the requirements of the Australia Greenhouse and Energy Minimum Standards (GEMS) regulator and the New Zealand Energy Efficiency and Conservation Authority (EECA).

UL conformity
BXN, MXN and MNN motors comply with the requirements for the American and Canadian markets and carry the nameplate with UL logo.

INMETRO conformity
BXN and MXN motors with WD3 or WD4/WD10 winding comply with the INMETRO requirements for the Brazilian market, and come with an additional label.

BIS conformity
BXN and MXN motors with active BIS option* comply with Bureau of Indian Standard requirements for the Indian market, and include the nameplate with ISI logo.

CCC/CEL conformity*
BXN and MXN motors with CN option* active, comply with the requirements for the Chinese market and include, where applicable, the nameplate with CCC logo and/or the CEL label.

*The motor must be configured with the global motor option (CN).

PRODUCT OVERVIEW

POWER OUTPUT DEPENDING ON THE AMBIENT TEMPERATURE

Standard motors are class F and can work with an ambient temperature from -15°C to 40°C.
There is a reduction in power output with ambient temperature above 40°C.

Ambient temperature [°C]	40	45	50	55	60
P / P_N	1,00	0,97	0,94	0,90	0,86

POWER OUTPUT DEPENDING ON THE ALTITUDE

Performance given in the catalogue is valid at an altitude lower than 1000 metres above sea level.
There is a reduction in power output at altitude above 1000 above sea level.

Altitude a.s.l. [m]	0 - 1000	1500	2000	2500	3000	3500	4000
P / P_N	1,00	0,97	0,92	0,88	0,84	0,80	0,76

TERMINAL BOX

EVOX motors have 9 studs as standard. A ground terminal is also supplied for earthing of the equipment.
Wiring instructions are provided either in the box and in the user manual.
Terminals number and type are shown in the following table:

IEC	Compatto	No. Of terminals	Terminal threads
BXN 63 ... BXN 112	**MXN 05 ... MXN 35** **MNN 05 .... MNN 20**	9	M4
BXN 132	**MXN 40**		

CABLE ENTRY

The holes used to bring cables to the terminal boxes use metric threads in accordance with standard EN 50262 as indicated in the following table:

IEC	Compatto	Cable gland and dimensions		Maximum cable diameter allowed [mm]
BXN 63	**MXN 05** **MNN 05**	2 x M20 x 1.5	1 + 1 hole on each side	13
		2 x M16 x 1.5		10
		1 x M16 x 1.5	1 hole in the back	10
BXN 71 ... BXN 112	**MXN 10 ... MXN 35** **MNN 10 ... MNN 20**	2 x M25 x 1.5	1 + 1 hole on each side	17
		2 x M16 x 1.5		10
		1 x M16 x 1.5	1 hole in the back	10
BXN 132	**MXN 40**	2 x M32 x 1.5	1 + 1 hole on each side	21
		2 x M16 x 1.5		10
		1 x M16 x 1.5	1 hole in the back	10

BEARINGS

Life lubricated preloaded radial ball bearings are used on our motors. The bearings types are shown in the following table:

IEC	DE	NDE	
		Without brake	With brake
BXN 63	6201 2Z C3	6201 2Z C3	6201 2Z C3

MXN 40	6308 2Z C3	6308 2Z C3	6308 2Z C3

Calculated endurance lifetime L10h, as per ISO 281, in unloaded condition, exceeds 40000 hrs.

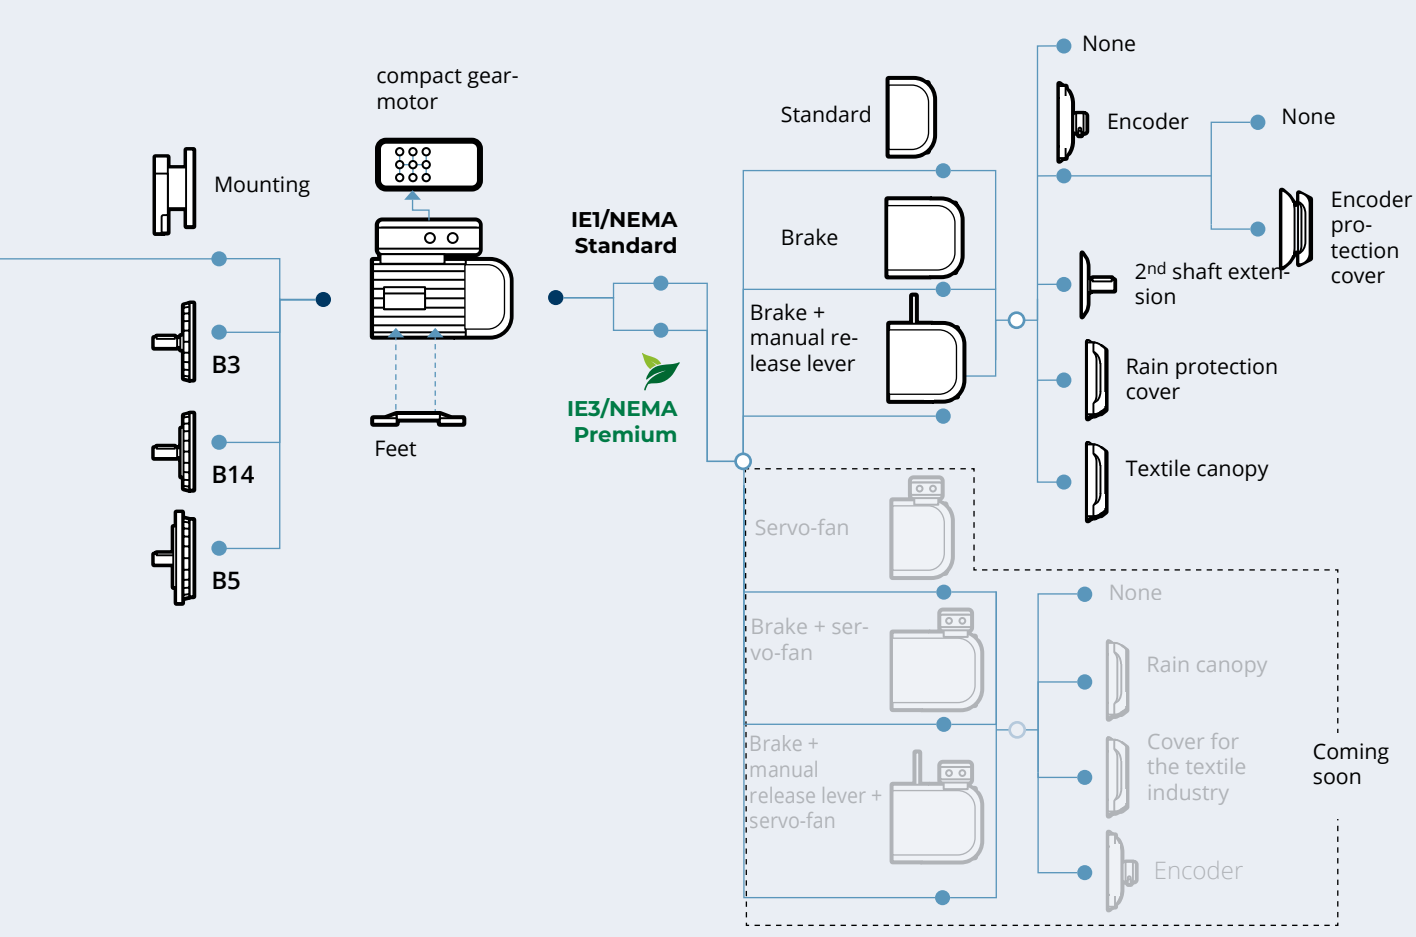
DE = drive end

NDE = non drive end

PRODUCT OVERVIEW

PRODUCT MODULARITY

Lots of e-motor versions available to perfectly **match** your **application needs.**



DC brake are available.

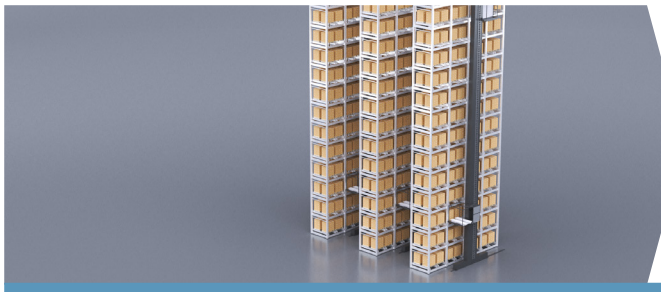
Suitable applications

Smart Conveyor

Features	Benefits
Advanced and accurate sensorless vector control providing high starting torque at low speed	Reducing current consumption at starting phase
Built-in PLC functions	Smart Conveyor programming without PLC
Standby mode	Energy saving
Integrated monitoring tool	Inverter failure prevention and diagnostics analysis

Wrapping Machine

Features	Benefits
Sensorless accurate control or closed-loop advanced vectorial control	Wrapping Machine progressive start and stop
PI control with advanced derivative control	Optimized film tension control
Configurable position and speed control via parameters	Variable lifting speed and up/down controls
Built-in PLC functions	Wrap cycle adjustment
Possible sync between several drives	Machine can operate without any PLC



Vertical automatic storage

Features	Benefits
SBC (Safety Brake Control)	Minimized application risks
Sensor-connected ready	Scheduled maintenance-ready
See Bonfiglioli BMC  To be connected to Motion Controller (CSP mode)	· Machine complete integration · Single supplier
All EVOX encoders are compatible with AxiaVert	Flexible application
iOS & Desktop user-friendly application and Bluetooth/Wi-Fi inverter connection	· Plug & Play solution · Easy troubleshooting

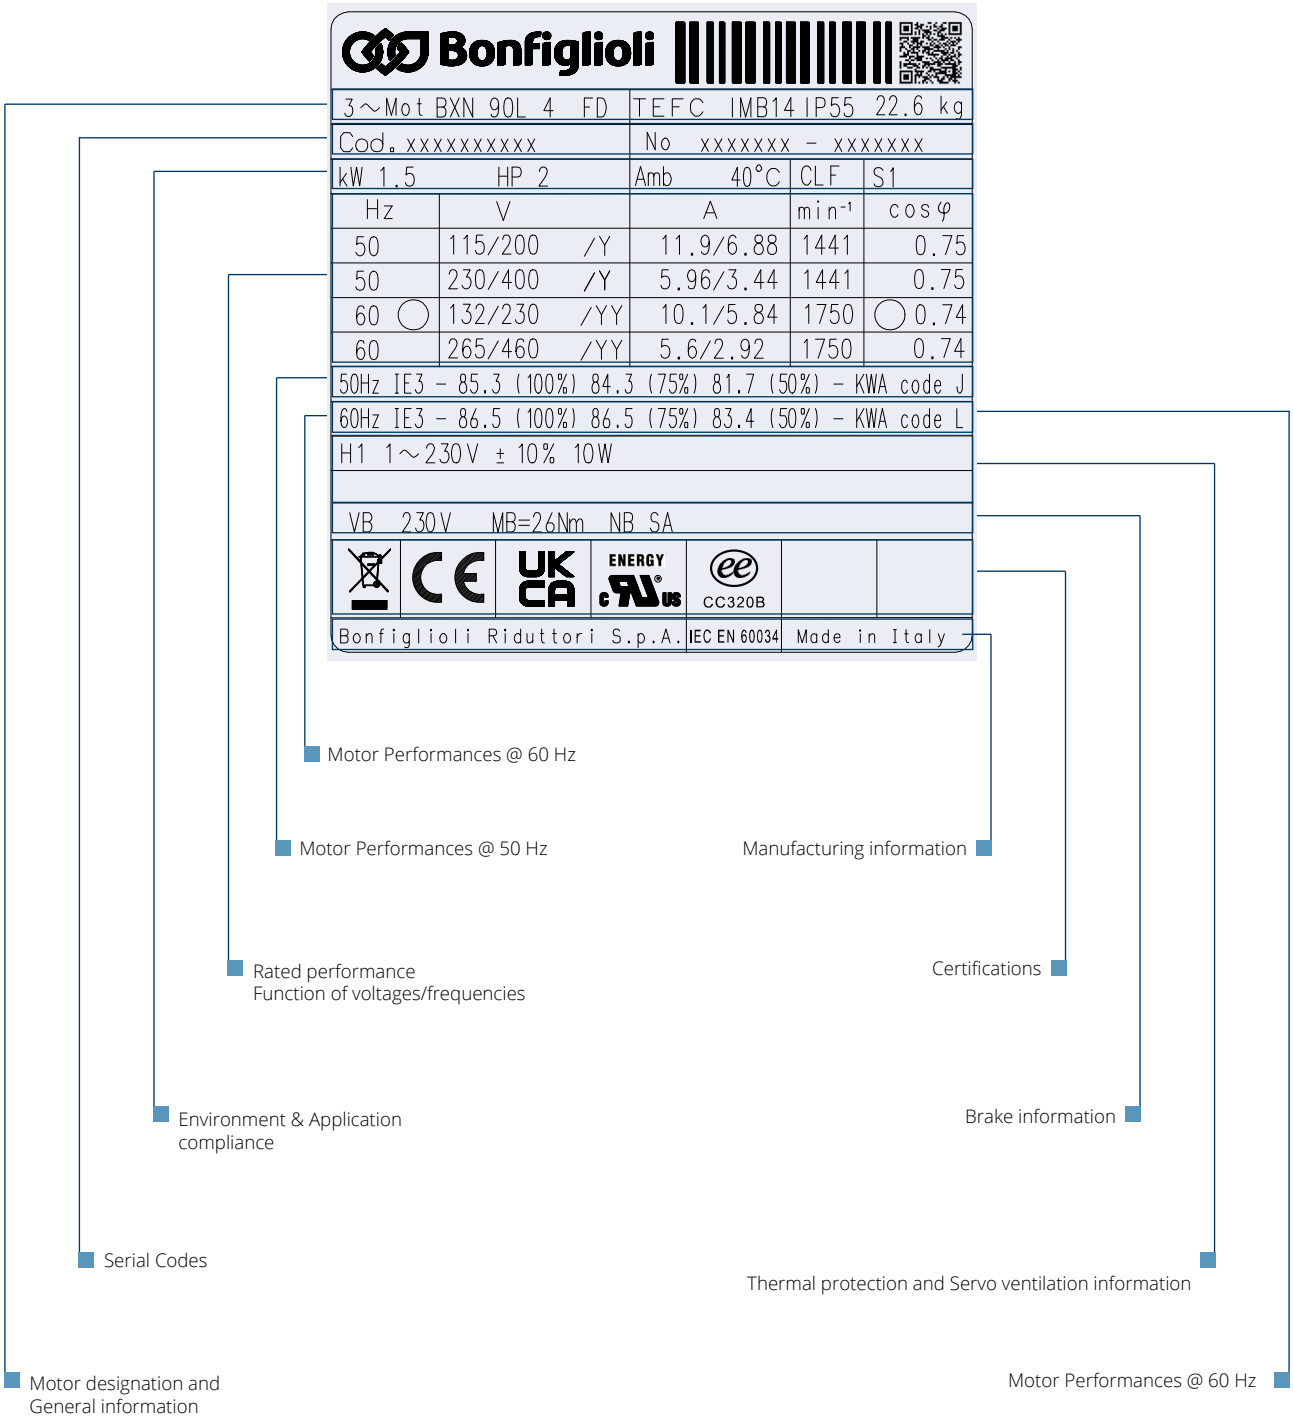
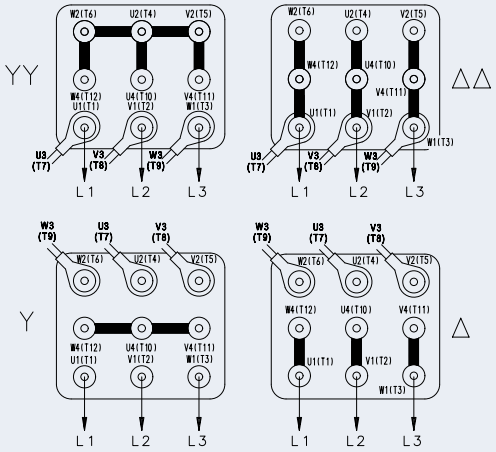
NAMEPLATE DESIGNATION



WINDING

Terminal box 9 PIN arrangement

Rotation is possible in both directions. If terminals U1, V1, and W1 are connected to line phases L1, L2 and L3, clockwise rotation (from drive end) is obtained. For counter clockwise rotation, switch two phases.



All EVOX motors are designed according to standard 60034-1, which states that a motor must be able to operate continuously in zone A within ± 5% of rated voltage and ± 2% of rated frequency, guaranteeing rated torque. Operation is also guaranteed in Zone B within a range of ± 10% of rated voltage and over a range of + 3 / -5% of frequency, but the machine may have performance deviations or overtemperatures exceeding those at rated voltage within the ± 5% range.

According to the standard, prolonged operation at the limits of zone B at ± 10% is not recommended.
For out-of-tolerance operation, temperature may exceed the limit provided in the relevant insulation class by 10 K.

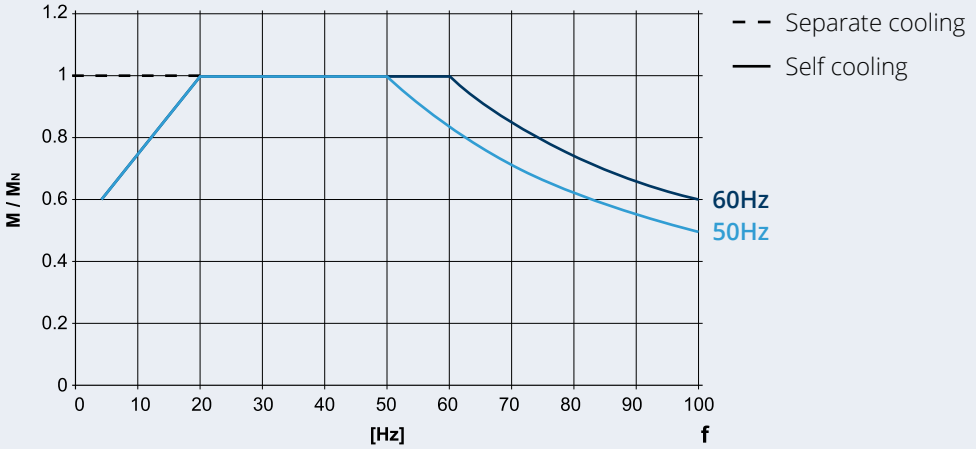
OPERATION WITH INVERTER POWER SUPPLY

Bonfiglioli electric motors can be used with PWM inverter power supply, and rated voltage at converter input up to 500 V. Typical torque/speed characteristics in S1 duty for motor with base frequency f_b = 50 Hz are given in the table below. For operating frequencies below approx. 30 Hz, due to the ventilation reduction, the torque of standard self-ventilated motors (IC411) must be properly derated or, alternatively, they must be equipped with independent servo-fan. For frequencies above the basic frequency, when the maximum inverter output voltage has been reached, the motor operates in a constant power operating range, with torque at the shaft that decreases approx. with the ratio (f/f_b). As the maximum torque of the motor decreases approx. with $(f/f_b)^2$, the permissible overload margin must be progressively reduced.



For operation above the rated frequency, the mechanical limit speed of the motors is given in the following table:

	n [min^{-1}] 4p
BXN 63 - BXN 132	4000

At speeds above the rated speed, the motors have more mechanical vibration and ventilation noise; for these applications, a grade B rotor balance is recommended.

The electromagnetic brake, if any, must always be powered separately from the motor power supply.

PROTECTION CLASS

IPxx

Index of protection

The IP – index of protection – shows the protection rate of the device from any external agents. It is composed of IP and 2 numbers, which show:

- the first digit describes the degree of protection rate against solid objects, dust, the solid particles and bodies.
- the second digit describes the degree of protection offered against liquids.

Standard motors are designed to IP55 degree of protection and IP54 in case of brake motors. They can be installed in dusty or humid environments.

IP examples:

IP54: · Protection against dust deposits · Protected against spray water

IP55: · Protection against dust deposits · Protection against water jets from any direction

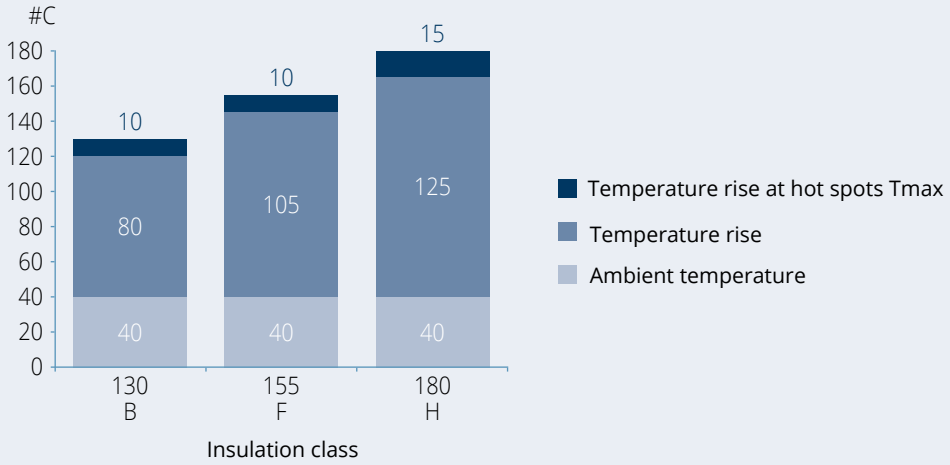
IP56: · Protection against dust deposits · Protection against powerful water jets from any direction

DESIGNATION

INSULATION CLASS

NEMA motor insulation classes describes the ability of motor insulation in the windings to handle heat (Ref. IEC 60085 and IEC 60034-1). There are four insulation classes in use namely: A, B, F, and H. All four classes identify the allowable temperature rise from an ambient temperature of 40° C (104° F). Classes B and F are the most common in many applications.

Temperature rise (T) and maximum temperatures at hot spots (Tmax) for insulation classes (IEC 60034-1).



CL F

Class F insulation

Bonfiglioli electric motors have been designed as standard with a class F insulation system (enamelled wire, insulators, impregnation resins). In standard motors, stator winding overtemperature normally remains below the 80 K limit corresponding to class B overtemperature. Class F allows temperature increases of 105 K (measured by the resistance variation method) and maximum temperatures of 155°C in motor hot spots.

A careful selection of insulating components makes the motors compatible with tropical climates and normal vibration. For applications involving the presence of aggressive chemicals or high humidity, contact Bonfiglioli Engineering for assistance with product selection.

CL H

Class H insulation

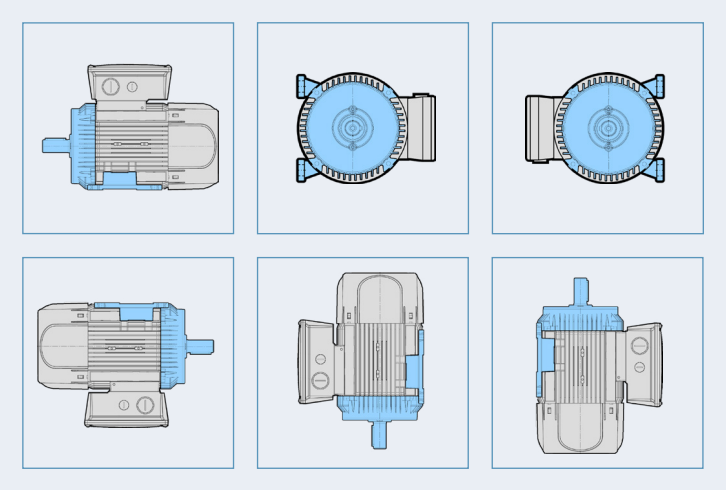
This option can be selected to achieve class H insulation level.
Class H allows temperature increases of 125 K (measured with the resistance variation method) and maximum temperatures at motor hot positions of 180°C.

VERSIONS

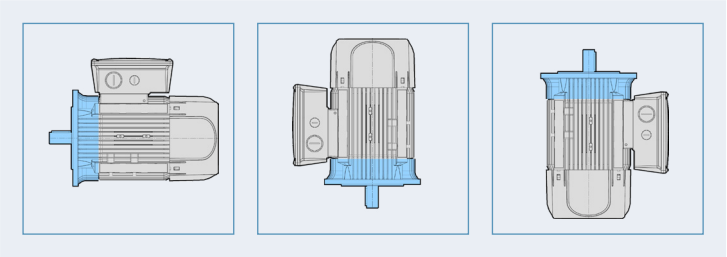
Motor Versions – IEC motors (BXN)

BXN motors are available in the design versions as indicated in the table below as per Standards EN 60034-7. Motor reporting on nameplate the standard mounting position can be mounted in the position illustrated in the following table:

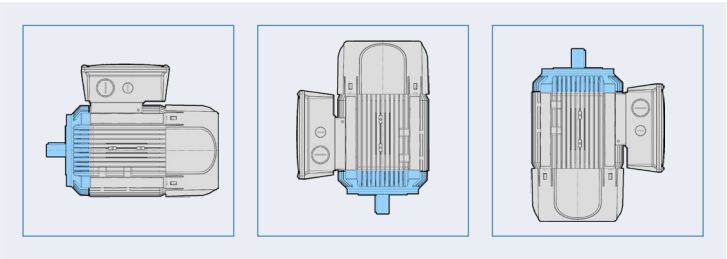
B3



B5



B14



B3 mounting can be combined with B5 or B14 thus becoming B35 in the first case and B34 in the second one.

For outdoor applications where the motor is mounted with the output shaft facing downwards, the selection of rain protection cover (RC) option is recommended.

In this case, specify this request during the ordering phase, because it is not present in standard motor versions.

Motor Versions – Integrated motors (MXN, MNN)

In case a compact motor of the EVOX platform (MXN and MNN) is configured as a stand-alone product, please refer to the following list:

Motor series	Motor size	CP gear unit size	Coupling
MXN/MNN	**05MA – 25L**	≤ 47	C
		> 47	L
	30LA – 40M	≥ 47	C

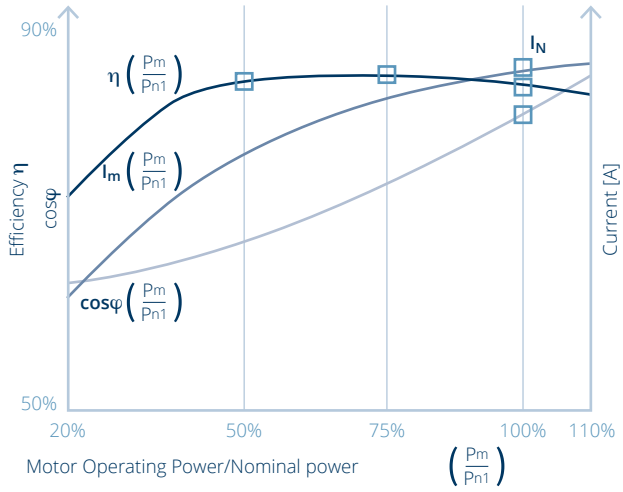
T_A= Acceleration torque

The T_A indicated in this catalogue is calculated with a finite element method because it is dependent from the Load Characteristic and the time.

$$T_a(t) = T_m(t) - T_L(t) = J\frac{\delta\omega}{\delta t}$$

(J is the motor + load inertia, both reduced at the output motor shaft)

T_A in this catalogue is calculated without a Load Characteristics and with only the EVOX motor inertia.



Please, refer to Configuration Guidelines & Setup section before the motor configuration, in order to select the correct Power.

Tolerances

As per CEI EN 60034-1 standards, the tolerances below apply to the following quantities.

Tolerance rule	Tolerance parameter
-0.15 (1 - η) P≤50kW	η
-(1 - cosφ)/6 min 0.02 max 0.07	cosφ
±20%*	Slip
+20%	Is
-15% +25%	Ts
-10%	Max torque

(*) ≤30% for motors with Pn < 1kw

Coefficient code for locked-rotor KVA - Nameplate marking

KVA coefficient is a good solution to compare the inrush of different manufactures' motors than % inrush current. The reason being that if a motor has a high full load current, the % inrush will be lower than a motor with the same inrush current but a lower full load current.

Letter designation	KVA per horsepower*	Letter designation	KVA per horsepower*
A	0 - 3.15	L	9.0 - 10.0
B	3.15 - 3.55	M	10.0 - 11.2
C	3.55 - 4.0	N	11.2 - 12.5
D	4.0 - 4.5	P	12.5 - 14.0
E	4.5 - 5.0	R	14.0 - 16.0
F	5.0 - 5.6	S	16.0 - 18.0
G	5.6 - 6.3	T	18.0 - 20.0
H	6.3 - 7.1	U	20.0 - 22.4
J	7.1 - 8.0	V	22.4 and up
K	8.0 - 9.0		

(*) the KVAs defined as horsepower range include the lower figure up to, but not including, the higher figure.

To determinate KVA per HP, use the following formula:

$$\frac{KVA}{P_{n1}\ [express\ in\ HP]} \quad where\ KVA = V_n\ \ I_S \frac{\sqrt{3}}{1000}$$

BRAKE | EVOX ELECTRIC MOTOR

BRAKE OPTION LIST DEEP DIVE

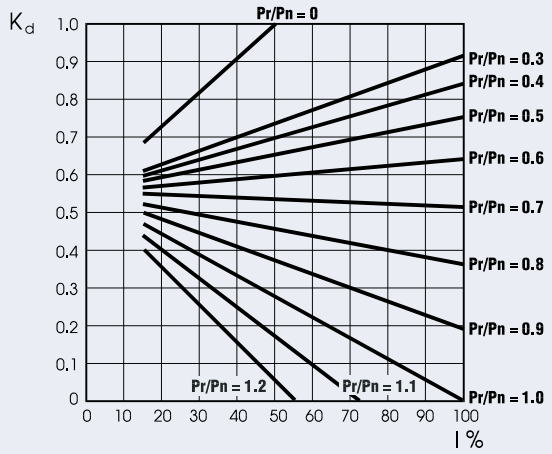
Permissible starts per hour, Z

The rating charts of brakemotors lend the permitted number of starts Z_0, based on 50% intermittence and for unloaded operation. The catalogue value represents the maximum number of starts per hour for the motor without exceeding the rated temperature for the insulation class F. To give a practical example for an application characterized by inertia J_c, drawing power P_r and requiring mean torque at start-up M_L the actual number of starts per hour for the motor can be calculated approximately through the following equation:

$$Z = \frac{Z_0 \cdot K_c \cdot K_d}{K_J}$$

where:

$K_J = \frac{J_m + J_c}{J_m}$	inertia factor
$K_c = \frac{M_a - M_L}{M_a}$	torque factor
$K_d =$	load factor, see the following table

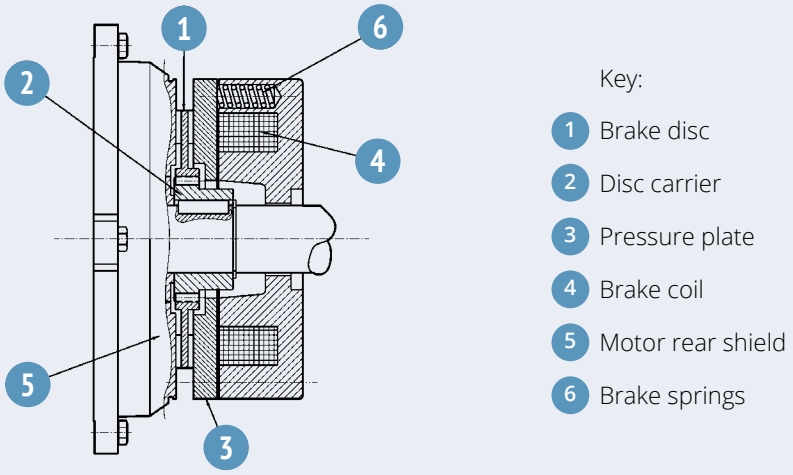


If actual starts per hour is within permitted value (Z) it may be worth checking that braking work is compatible with brake (thermal) capacity Wmax.

Asynchronous brake motors

Standard electric motors can be equipped with a brake thus creating a self-braking motor. The brake helps in situation where it is necessary a quickly and safely stop of the machine. The Bonfiglioli .

All brakes are designed to provide *fail-safe* operation, meaning that they are applied by spring action in the event of power failure.



Key:

1. Brake disc
2. Disc carrier
3. Pressure plate
4. Brake coil
5. Motor rear shield
6. Brake springs

In case of power failure, pressure springs push the reinforcement plate against the brake disc. The disc is trapped between the reinforcement plate and the motor shield, thus stopping shaft rotation. When coil is energised, a magnetic field - strong enough to overcome spring action - attracts the reinforcement plate. The brake disc, which is integral with the motor shaft, is thus released.

Brake type selection

FD brakes [DC brake power supply]: they are suitable for applications where a smooth, progressive, dynamic, silent and soft reaction time is requested.

Cases	Motor power supply	Brake coil power supply	Brake power supply designation	Braking system
1	CA	Connected to the terminal box of the motor	DIR	FD + rectifier
2		Dedicated AC	SA	FD + rectifier
3		Dedicated DC	SD	FD

BRAKE | EVOX ELECTRIC MOTOR

BRAKE OPTION LIST DEEP DIVE

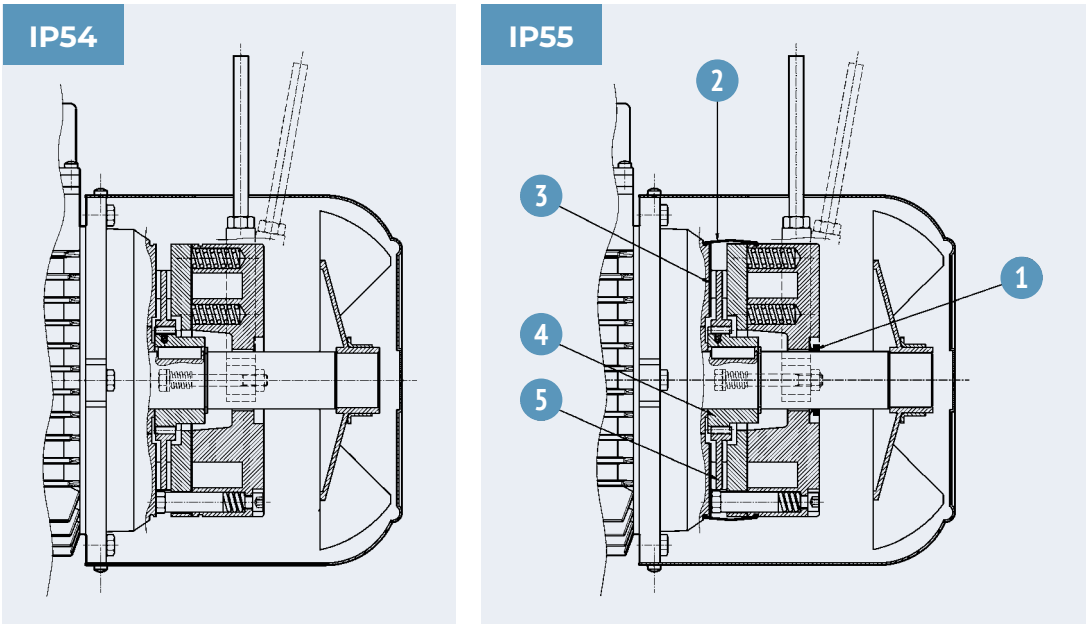
Brake type

FD

DC brake type

Direct current toroidal-coil electromagnetic brake bolted onto the motor shield. Preloading springs provide axial positioning of magnet body. Brake disc slides axially on steel hub shrunk onto motor shaft with anti-vibration device. Brake torque factory setting is indicated in the corresponding motor rating charts. Braking torque may be modified by changing the type and/or number of springs.
If requested, the motors may be equipped with a manual release lever with automatic return (R) or a system for holding the brake in the released position (RM). See variant in paragraph "BRAKE RELEASE SYSTEMS" for available release lever locations. FD brakes ensure excellent dynamic performance with low noise. DC brake operating characteristics may be optimized to meet the application requirements by choosing from the various rectifier/power supply and wiring connection options available.

For applications involving lifting and/or high hourly energy dissipation, contact Bonfiglioli's Technical Service



BXN, MXN and MNN brake motors comes with an IP54 protection degree as standard and it is possible to configure them with an IP55 as an option. If **IP55** is selected, the following construction variants will be applied:

1. V-ring at N.D.E. of motor shaft
2. Dust and waterproof rubber seal
3. Stainless steel ring placed between motor shield and brake disc
4. Stainless steel hub
5. Stainless steel brake disc

For FD technical specifications, refer to the performance section

OPTIONS | BRAKE

AC/DC rectifier type

The FD brake coil can be directly fed with DC current or by an AC/DC connection operated by a diode half-wave rectifier ($V_{DC} \approx 0{,}45 \times V_{AC}$). A rectifier is a circuit that converts the Alternating Current (AC) input power into a Direct Current (DC) output power. Evox products are available in versions NB and SB, as detailed in the table below:

	Brake	Standard	At request
BXN 63	FD 02		BXN 71	FD 03 - FD 53		
BXN 80	FD 04		
BXN 90S	FD 14		
BXN 90L	FD 05		
BXN 100	FD 15		
BXN 112	FD 06S		
BXN 132	FD 56 - FD 06 - FD 07		

(*) $t_{2c} < t_{2r} < t_2$

NB

Simple half-wave rectifiers

Rectifier **NB** lets just one half of each complete AC supply wave through, to transform it into a DC supply. The brake release response time is reduced.

SB

Double half-wave rectifiers:

Rectifier **SB** with electronic energizing control over-energizes the electromagnet upon power-up to cut brake release response times and then switches to normal half-wave operation once the brake has been released.

Use of the **SB** rectifier is mandatory in the event of:

- High number of operations per hour
- Reduced brake release response times
- Brake exposed to extreme thermal stress

BRAKE | EVOX ELECTRIC MOTOR

OPTIONS | BRAKE

Brake hand release systems

Spring-applied brakes type FD may be equipped with optional manual release devices. These are typically used for manually releasing the brake before servicing any machine or system parts operated by the motor.

Availability of the various disengagement devices is indicated below:

	R	RM
BXN_FD	BXN 63 ... BXN 132	BXN 63 ... BXN 132

R

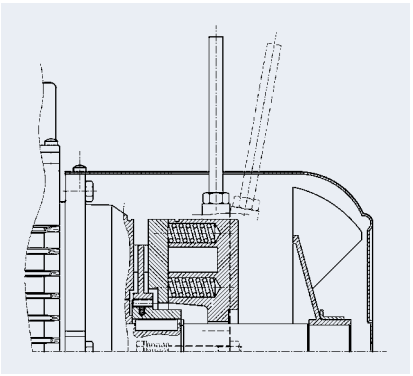
Lever with return spring

With this options, the return spring brings the release lever back in the original position.

RM

Lever with a release blocked position

On brake motors type FD, if the RM option is specified, the release device may be locked in the "release" position by tightening the lever until its end engages with a brake housing projection.



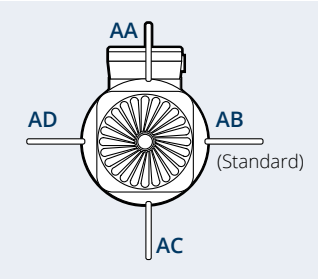
Brake hand release lever position

AA

Release lever orientation

Unless otherwise specified, the release lever is located 90° away from the terminal box – identified by letters [AB] in the diagram on the right – in a clockwise direction on both R and RM options.

Alternative lever positions [AA], [AC] and [AD] are also possible when the corresponding option is specified.



MORE ON BRAKE OPTIONS

Separate brake supply

DIR

Direct brake supply

The brake system is directly powered through the electric motor terminal board power supply

SA

Brake AC separate power supply

The brake coil is directly powered through an independent line, separated from the motor one.

FD-NB/SB-SA: the rated AC voltage which powers the rectifier must be specified. E.g. SA 400 (V AC)

SD

Brake DC separate power supply

The brake coil is directly powered with a DC current and the rectifier is not present.

The rated coil voltage must be specified, E.g. SD 24 (V DC).

Brake supply

230

FD brake power supply

A rectifier installed inside the terminal box feeds the DC brake coil. Wiring connection across rectifier and brake coil is performed as factory standard.

On all single-pole motors, the rectifier is connected to the motor terminal board.

Brake power supply voltage is indicated in the following table, regardless of the mains frequency:

FD-SD brake supply voltages

4P	Motor supply	Braking system supply	Voltage (V CC)

FD brake connection

For switch-pole motors, and where a separate brake power supply is required, connection to rectifier must comply with brake winding voltage stated in the motor nameplate.

Because of the inductive load type, brake control and DC line interruption must use contacts from usage class AC-3 to IEC 60947-4-1.

Table (1) – Brake coil with direct power supply, the brake activates when the AC line is interrupted.

Table (2) – Brake coil with separate power supply, a.c. line interruption.

Table (3) – Brake coil with direct power supply, the brake activates when the AC and DC lines are interrupted.

Table (4) – Brake coil with separate power supply, a.c. and d.c. lines interruption.

Capacitive filter

CF

Capacitive filter

An optional capacitive filter is available for brake motors type FD only. When the suitable capacitive filter is installed upstream of the rectifier (option CF), motors comply with the emission limits required by standard EN6100-6-3:2007 “Electromagnetic compatibility (EMC) - Generic standards - Part 6-3: Emission standard for residential, commercial and light-industrial environments”.

Essentially, the capacitive filter absorbs some of the electromagnetic waves interference so that the motor will be suitable for light industrial, residential and commercial applications.

Brake connection when equipped with the CF option:

Motors with FD brake, when fitted with the suitable capacitive filter at rectifier input (option CF), meet the emission limits required by Standard EN 61000-6-3:

«Electromagnetic compatibility - Generic Emission Standard - Part 6.3: Residential, commercial and light industrial environments»

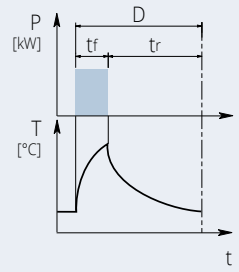
OPTION DETAIL

Duty Cycle

Unless specified, catalogue motor power refers to continuous duty S1. Any different condition has to be classified in the correct Duty Cycle, according with CEI EN 60034-1.

S2-...MIN

S2 Duty Cycle (Limited duration duty)



This type of duty is characterized by operation at a constant load for a limited time [$\mathbf{t_f}$], which is shorter than the time required to reach thermal balance, followed by an idle period [$\mathbf{t_r}$] where the motor can return to the ambient temperature.

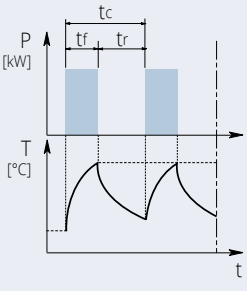
The duration of the duty cycle is: D=tf+tr

t_f = operating time under constant load

t_r = idle period

S3-...%

S3 Duty Cycle (Periodical intermittent duty)



This type of duty is characterized by a sequence of identical operation cycles formed by a constant load operation and an idle period.

For this type of duty, the starting current does not significantly affect overtemperature.

t_f = operating time under constant load

t_r = idle period

t_c = cycle time

$$I = \frac{tf}{tf + tr} \cdot 100$$

t_f = operating time under constant load

t_r = idle period

For a S2 & S3 duty cycle motor, the required motor power should be multiplied by the coefficient reported in the following table.

	Service Duty						
	S2			S3			S4 - S9
	D (min)			Intermittance (I)			
	10	30	60	25%	40%	70%	Contact us
f_m	1.35	1.15	1.05	1.25	1.15	1.1	

If cycles from S2 to S9 are chosen, the motor nameplate will be marked with the cycle name, an increased power rating and electrical data to suit the type of duty.

For further details, please contact Bonfiglioli's Technical Service

BACK TO OPTION LIST

Thermal protection

In addition to the standard protection provided by the magneto-thermal device, motors can be supplied with built-in thermal probes to protect the winding against overheating caused by severe and demanding application or by an insufficient ventilation of the environment.

This additional protection is highly recommended on servo-ventilated motors (IC416).

E3

Thermistors

These are semi-conductors having rapid resistance variation when they are close to the rated switch off temperature (150°C for CLF or 180° for CLH insulation class). Variations of the R=f(T) characteristic are specified under DIN 44081, IEC 34-11 Standards. Positive temperature coefficient thermistors are normally used (also known as PTC “cold conductor resistors”). Usually this kind of thermal protection is easy to be found on inverters.

Thermistors cannot control relays directly and must be connected to a suitable disconnect device. Thus protected, three PTCs connected in series are installed in the winding, the terminals of which are located on the auxiliary terminal-board.

D3

Bimetallic thermostats

These types of protective devices house a bimetal disk. Bimetal switches operate on the principle of mechanical deformation as a result of long-term heating. Bimetal strips bent as a result of such heating have a spring action that results in sudden reversal of the curvature (concave to convex or vice-versa).

When the rated switch off temperature temperature (150°C for CLF or 180° for CLH insulation class) is reached, these temperature detectors (NC contacts) can deactivate an auxiliary circuit. The circuit can only be reclosed following a considerable fall in temperature. Three bimetallic thermostats connected in series are usually employed, with normally closed contacts. The terminals are located on an auxiliary terminal-board.

Bimetal switches are suitable protection devices in the case of slowly rising motor temperatures. When the motor current rises quickly (e.g. with a locked rotor), these switches are not suitable due to their large thermal time constants.

OPTIONS | EVOX ELECTRIC MOTOR SIDE

OPTION DETAIL

PT1000

Resistance thermometer

The resistance thermometer has a chip for a temperature sensor, the resistance of which changes in relation to temperature according to a series of reproducible basic values. The changes in resistance are transferred as changes in current.

At 0 °C, the measurement resistances are adjusted to 1000 Ω for the Pt1000 and correspond to the accuracy class B (i.e. the relationship between resistance and temperature). The limit deviation is ±0.3 °C, and the admissible deviations are defined in EN 60751. The Pt1000 resistance thermometer will, in the future, gradually replace the KTY84-130 temperature sensors available today. The relationship between the temperature and the electrical resistance of conductors is utilized in the Pt1000 to measure the temperature, just like with the additional resistance thermometers described above. Pure metals undergo larger changes in resistance than alloys and have a relatively constant temperature coefficient.

K1

KTY 84-130 temperature sensor

The design characteristics of this sub-group of PTC thermistors allow them to be used as positive temperature coefficient sensors with variable resistance. Functioning temperature range: 0°C ... +260°C. Within the measuring range, however, the KTY 84-130 characteristic rises almost linearly. The temperature sensor is embedded in the winding overhang of the motor in the same way as the components mentioned above. It is characterized by its outstanding precision, high reliability, and temperature stability, as well as a fast response time. Thanks to these properties, which permit the almost analogue monitoring of winding temperature, the KTY 84-130 is preferred for converter operation. Thermistors cannot control relays directly and must be connected to a suitable disconnect device. Terminals (polarized) for 1 x KTY 84-130 are provided on an auxiliary terminal strip.

Feedback units

Motors can be combined with six different types of encoders in order to achieve feedback circuits. The installation requires an expansion module which depends on the type of the encoder selected.

Configurations with double-extended shaft (PS) and rain/fabric canopy (RC, TC) are not compatible with encoder installation.

EN1

EN2

EN3

Incremental encoder

These encoders are speed sensors obtained with optic-electronic technology and can be utilized as speed transducers. They are composed by an electric circuit and an optic disk integral with the shaft. Usually, there are 2 main standards for incremental encoder outputs: Push-pull and Line driver. The first one is useful in case of long wirings, the second one for applications in high electromagnetic pollution environments.

EN4

SIN/COS encoder

These encoders are both speed and position sensors obtained with optic-electronic technology and can be used as position and speed transducers at the same time. Usually employed for applications that require very high dynamic features.

EN5

EN6

Absolute encoder

These encoders are position sensors obtained with optic-electronic technology and can be utilized as position transducers. Usually employed for applications that require high precision

		EN1	EN2	EN3	EN4	EN5	EN6
Encoder type		Incremental	Incremental	Incremental	sin/cos	Absolute single turn	Absolute multi-turn
Output interface		TTL/RS 442	TTL/RS 442	HTL push-pull	Sinus VPP 0.5	HIPERFACE®	HIPERFACE®
Power supply voltage VIN	[V]	4 ... 6	10 ... 30	12 ... 30	4.4 ... 5.5	7 ... 12	7 ... 12
Output voltage	[V]	5	5	12 ... 30	-	-	-
Current in unloaded conditions	[mA]	120	100	100	40	80	80
Pulses per revolution		1024					
Steps per revolution		-	-	-	-	15 bit	15 bit
Revolutions		-	-	-	-	-	12 bit
Number of signals		6 (A, B, Z + inverted signals)			6 (cos-, cos+, sin-, sin+, Z, Z̄)	-	-
Max. output frequency	[kHz]	600				200	
Max. speed	[rpm]	6,000 (9,000 rpm for 10s)					
Temperature range	[°C]	-30 ... +100					
Protection class		IP65					

The Bonfiglioli ACU and ANG inverter series can manage all 6 types of encoders mentioned above and can be easily selected through the product configurator platform.

OPTIONS | EVOX ELECTRIC MOTOR SIDE

OPTION DETAIL

Anti-condensation heaters

H1

Anti-condensation heaters

Where an application involves high humidity or extreme temperature fluctuations, e.g. inactive motors in humid atmospheres or motors that are subject to widely fluctuating temperatures, motors may be equipped with an anti-condensate heater. A single-phase power supply is available in the auxiliary terminal board inside the main terminal box.

Values for the absorbed power are listed below:

	H1 1~230V ± 10% P[W]
BXN 63 ... BXN 80	10
BXN 90 ... BXN 132	25

Warning! Always cut off the anti-condensation heater power before operating the motor.

Tropicalization

TP

Tropicalization

The TP option uses stators that are impregnated with highly hydrolysis-resistant resins. This allows the motors to be used in areas with increased air humidity and temperature, such as in tropical climate conditions.

The used wiring insulation materials and the impregnating resin protect the motor against termite-related damage

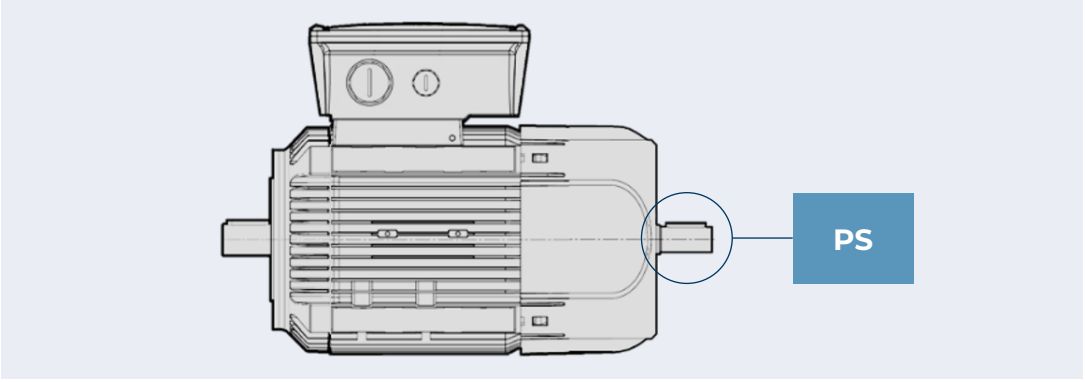
Second shaft extension

PS

Second shaft extension

The PS option provides the motor for an additional shaft end. This second shaft end is designed with a conventional keyway and key in accordance with DIN 6885 Sheet 1 (ISO 773).

This option is not compatible with variants RC, TC, EC, U1, EN1, EN2, EN3, EN4, EN5, EN6. For shaft dimensions please see motor dimensions tables.



BACK TO OPTION LIST

External protection

External protection canopies are used to prevent damages caused by external conditions, such as rain or cellulose particles to the electrical motor.

RC

Rain canopy

The rain canopy protects the motor from dripping and avoids the penetration of solid bodies. It is recommended when motor is installed in a vertical position with the shaft downwards. Only in this position a perfect coverage from rain is granted. The guard extends the length of the motor or brake motor. Please check the dimensions table.

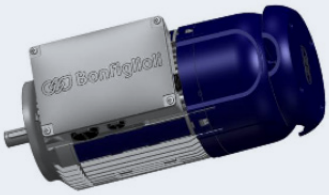
The drip cover is not compatible with variants PS, EN1, EN2, EN3, EN4, EN5, EN6.

TC

Textile canopy

Option TC is a cover variant for textile industry environments, where lint may obstruct the fan grid and prevent a regular flow of cooling air. The overall dimensions are the same as drip cover type RC.

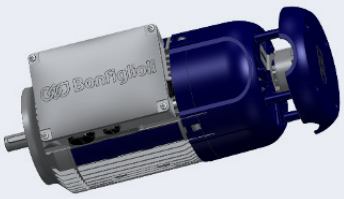
This option with variants PS, EN1, EN2, EN3, EN4, EN5, EN6.



EC

Encoder canopy

Option EC is a cover variant specifically made for our encoders. It protects them from impacts and may help in prolonging their productive life.



OPTIONS | EVOX ELECTRIC MOTOR

MORE ON OPTIONS LIST

Certifications

CN

Global motor

With the CN option, BXN and MXN motors can be sold in the most important markets worldwide such as Europe, UK, USA, Canada, China, Russia, Australia and New Zealand.
In detail, the motor will bear the CE, UKCA, UL, CCC and, where required, CEL labelling on the nameplate. The motors also comply with EAC and EECA requirements.

This option is available in the following winding/power combinations:

Motor series	Size	Power	Service Duty	Winding
BXN	63MA a 80MA	0,12 a 0,55 kW	S1	WD1 - WD3*
MXN	05MA a 20MA			

Motor series	Size	Power	Service Duty	Winding
BXN	80MB a 112M	0,75 a 4 kW	S1	WD1
MXN	20MB a 35M			

* Brazilian certification is standard on the WD3 winding only, and additional INMETRO labelling is provided.

BIS

Indian market

With the BIS option, BXN and MXN motors can be sold in the most important markets worldwide such as Europe, UK, USA, Canada, India, Russia, Australia and New Zealand.
In detail, the motor will bear the CE, UKCA, UL, ISI marks on the nameplate. The motors also comply with EAC and EECA requirements.

This option is available on the following windings:

Motor series	Size	Power	Winding
BXN	63MA a 112M	0,12 a 4 kW	WD1 - WD2 - WD3 - WD5 - WD6
MXN	05MA a 35M		

Certificates

ACM

Motor certificate of compliance

The document certifies the compliance of the product with the purchase order and the construction in conformity with the applicable procedures of Bonfiglioli's Quality System.

CC

Inspection certificate

The document entails checking the order compliance, visual inspection of external conditions and instrumental testing of the electrical characteristics in unloaded conditions. Inspected units are sampled within the shipping batch and marked individually.

OUR GLOBAL PRESENCE

Thanks to an international network of closely interconnected commercial and production sites, we can guarantee the same high standards of Bonfiglioli quality anywhere at any given time. We know that our direct presence in local markets is the key to long-lasting success, so our family includes 18 production sites, 23 commercial sites and more than 550 distributors around the world.

Our organization is always close by, offering complete and efficient solutions and supporting our customers with dedicated services, co-engineering and after-sales assistance.
