

GARLANDS ROLLERS SETS

INTERkraź

GARLANDS (SUSPENDED ROLLERS SETS)

The sets of garland-type suspended rollers are dedicated to transporting heavy materials in long conveyors. They are characteristic for higher operating flexibility while keeping high resistance. They reduce the impact of material on the belt and rolls. They allow for transporting material with high belt speed. They also enable simple and fast installation and maintenance with no need for deactivating a transporting line.

	Belt width [mm]	Pipe diameter [mm]	Coat length [mm]	Type of hub	Bearing size
	1000	Ø133	380	cast iron - pressed	6305
	1200		465
